

GenAI

Do you know what an GenAI is?

Generally speaking, generative AI is a recently emerged and popular form of AI technology. Tools like DeepSeek, Doubao, and ChatGPT—which can interact with users through conversation, answer questions, generate and edit images, and perform similar tasks—are all examples of generative AI.

 deepseek

GenAI, short for Generative Artificial Intelligence, is a type of AI that creates new content, such as text, images, audio, and video, based on existing data. Its underlying principle is to predict the most likely output based on the user's input, enabling it to perform a wide range of tasks such as writing, translation, question answering, and image generation. It's designed to mimic human creativity and can generate novel outputs that resemble the training data it was exposed to.

I am planning to travel to Antarctica. Please generate a travel guide for me.

Absolutely! Here's a **compact and practical travel guide** tailored for your upcoming **trip to Antarctica** — designed to help you prepare, stay safe, and make the most of this once-in-a-lifetime adventure.

Antarctica Travel Guide

About Antarctica

- The coldest, driest, and windiest continent on Earth
- No cities or permanent residents — only scientific bases
- Protected by international treaties (no country owns it)
- Home to stunning glaciers, penguins, whales, and icebergs

Best Time to Visit

Antarctic Summer: November – March

- Nov–Dec:** Pristine snow, penguin courtship
- Jan–Feb:** Penguin chicks hatch, peak whale watching
- Mar:** Quieter, dramatic sunsets, whale activity continues

Please generate chibi style emoticons for me.

Please translate the following passage into Chinese
A GenAI phone is a smartphone that utilizes generative AI models and features directly on the device.

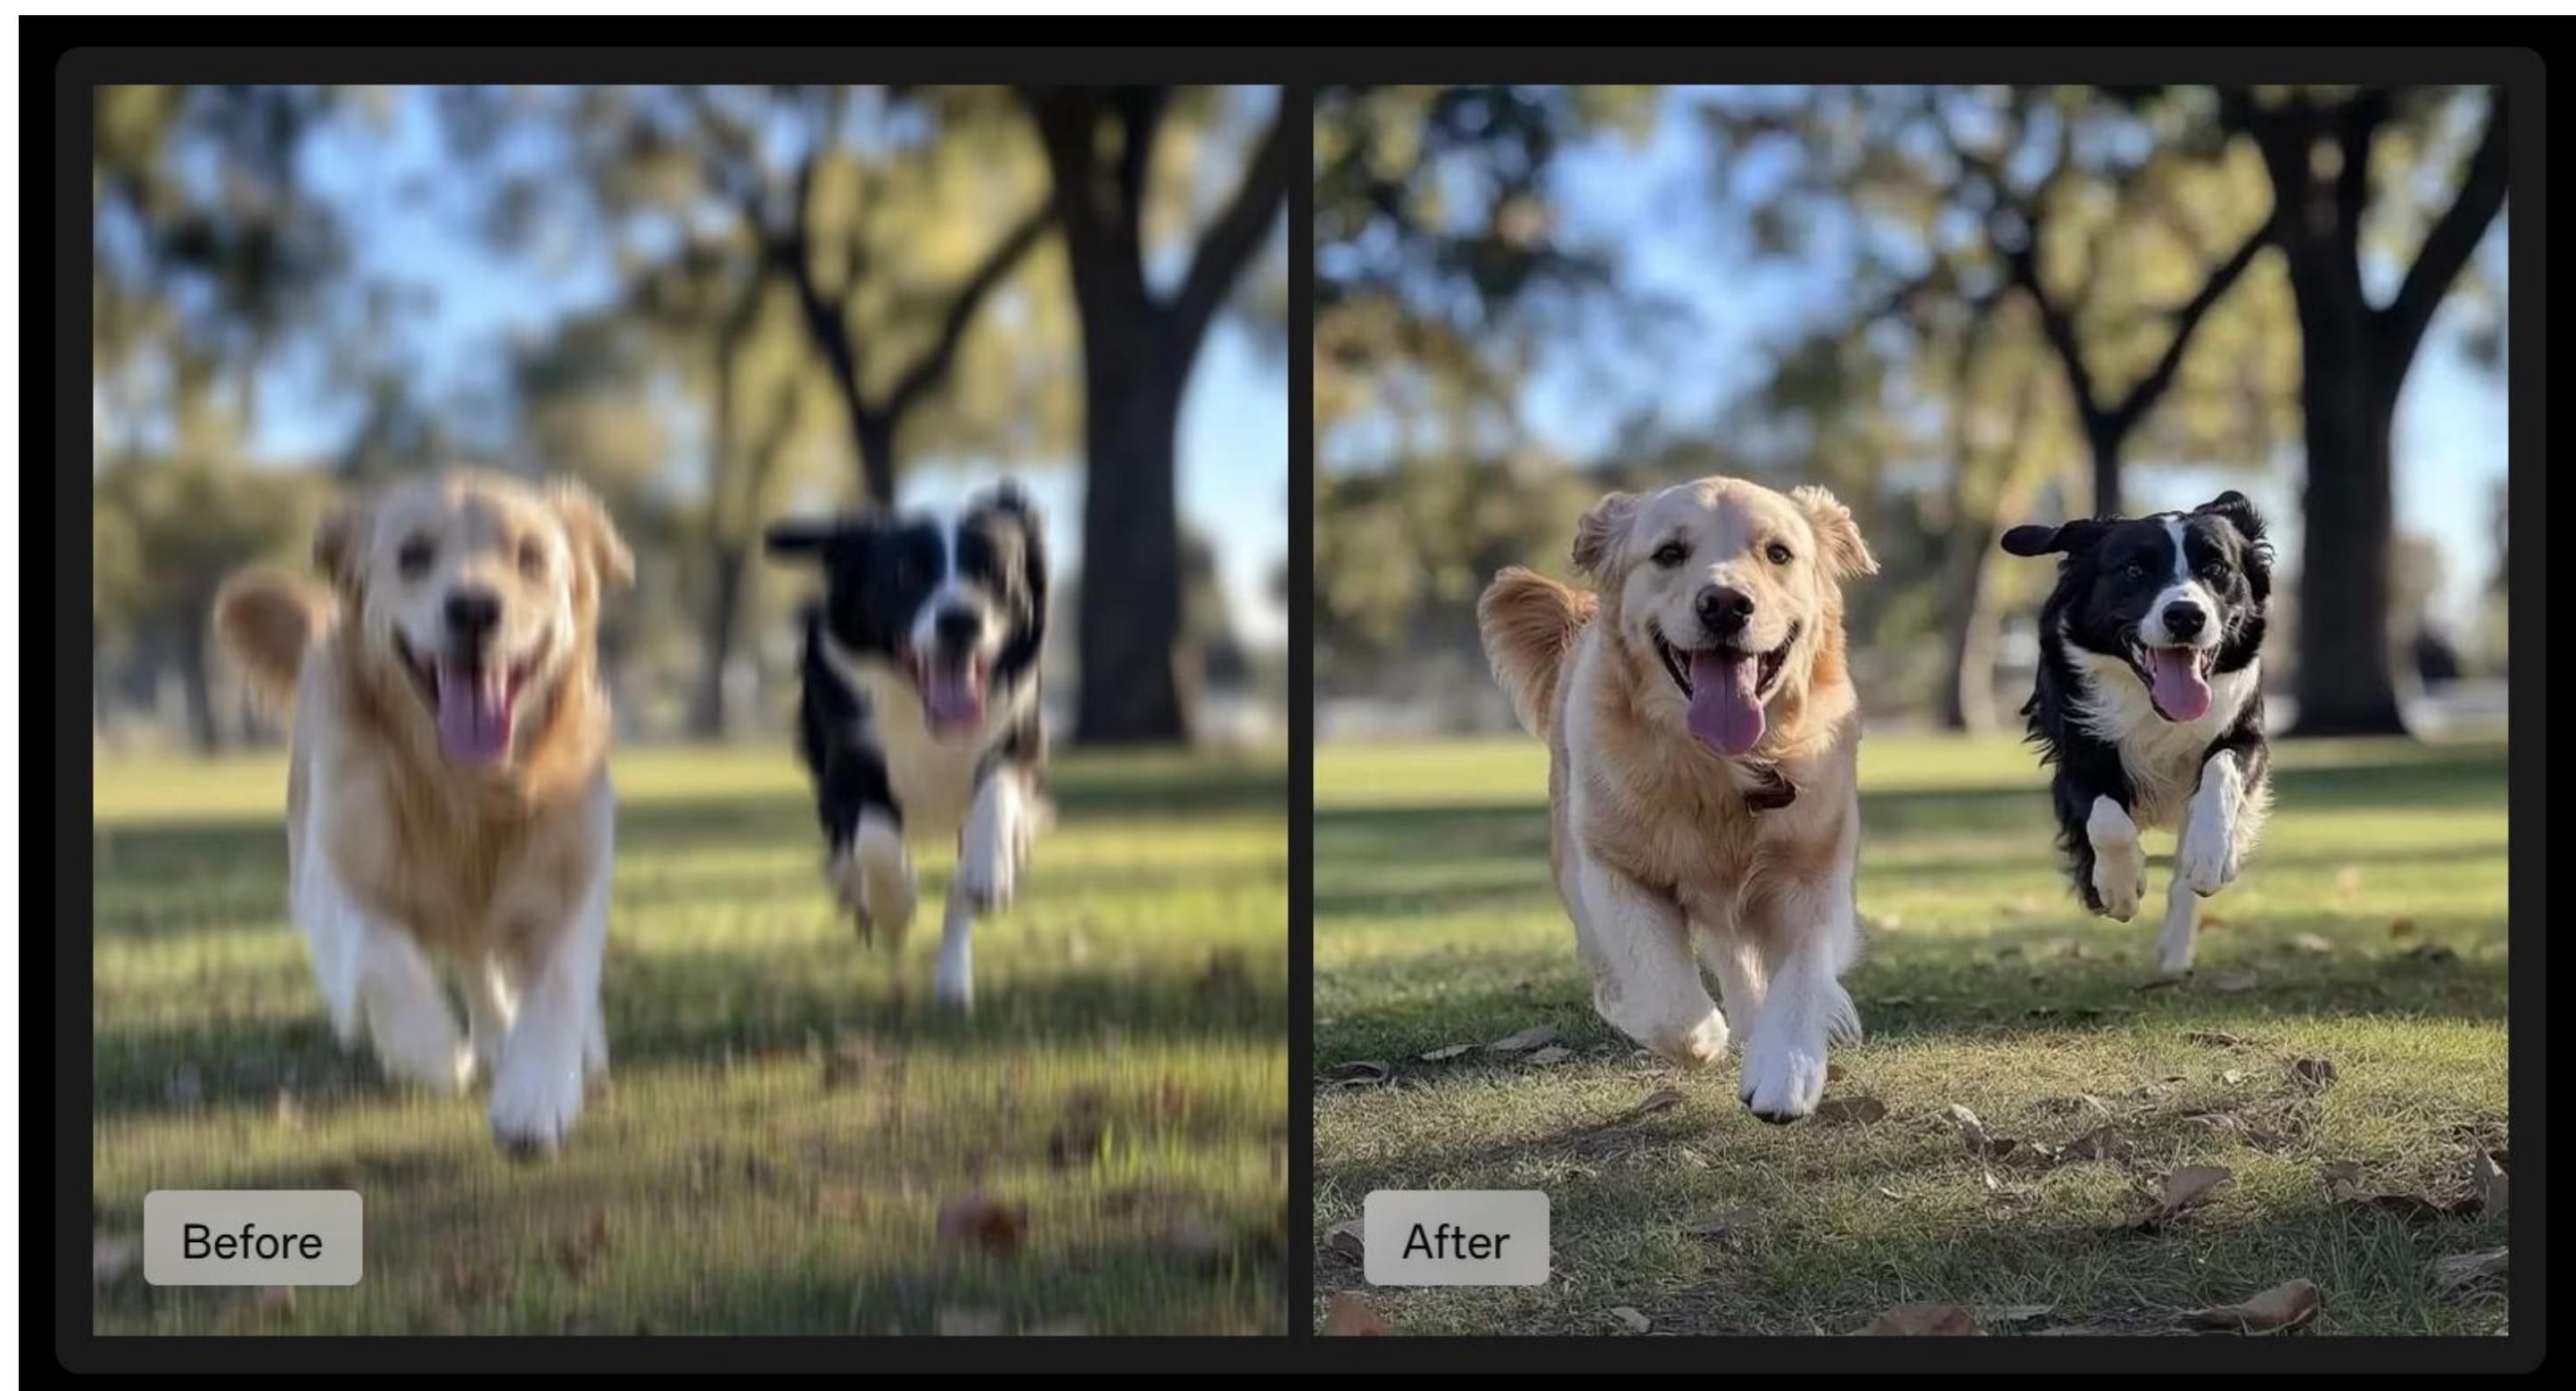

GenAI 手机是一种在设备上直接使用生成式人工智能模型和功能的智能手机。

Translation

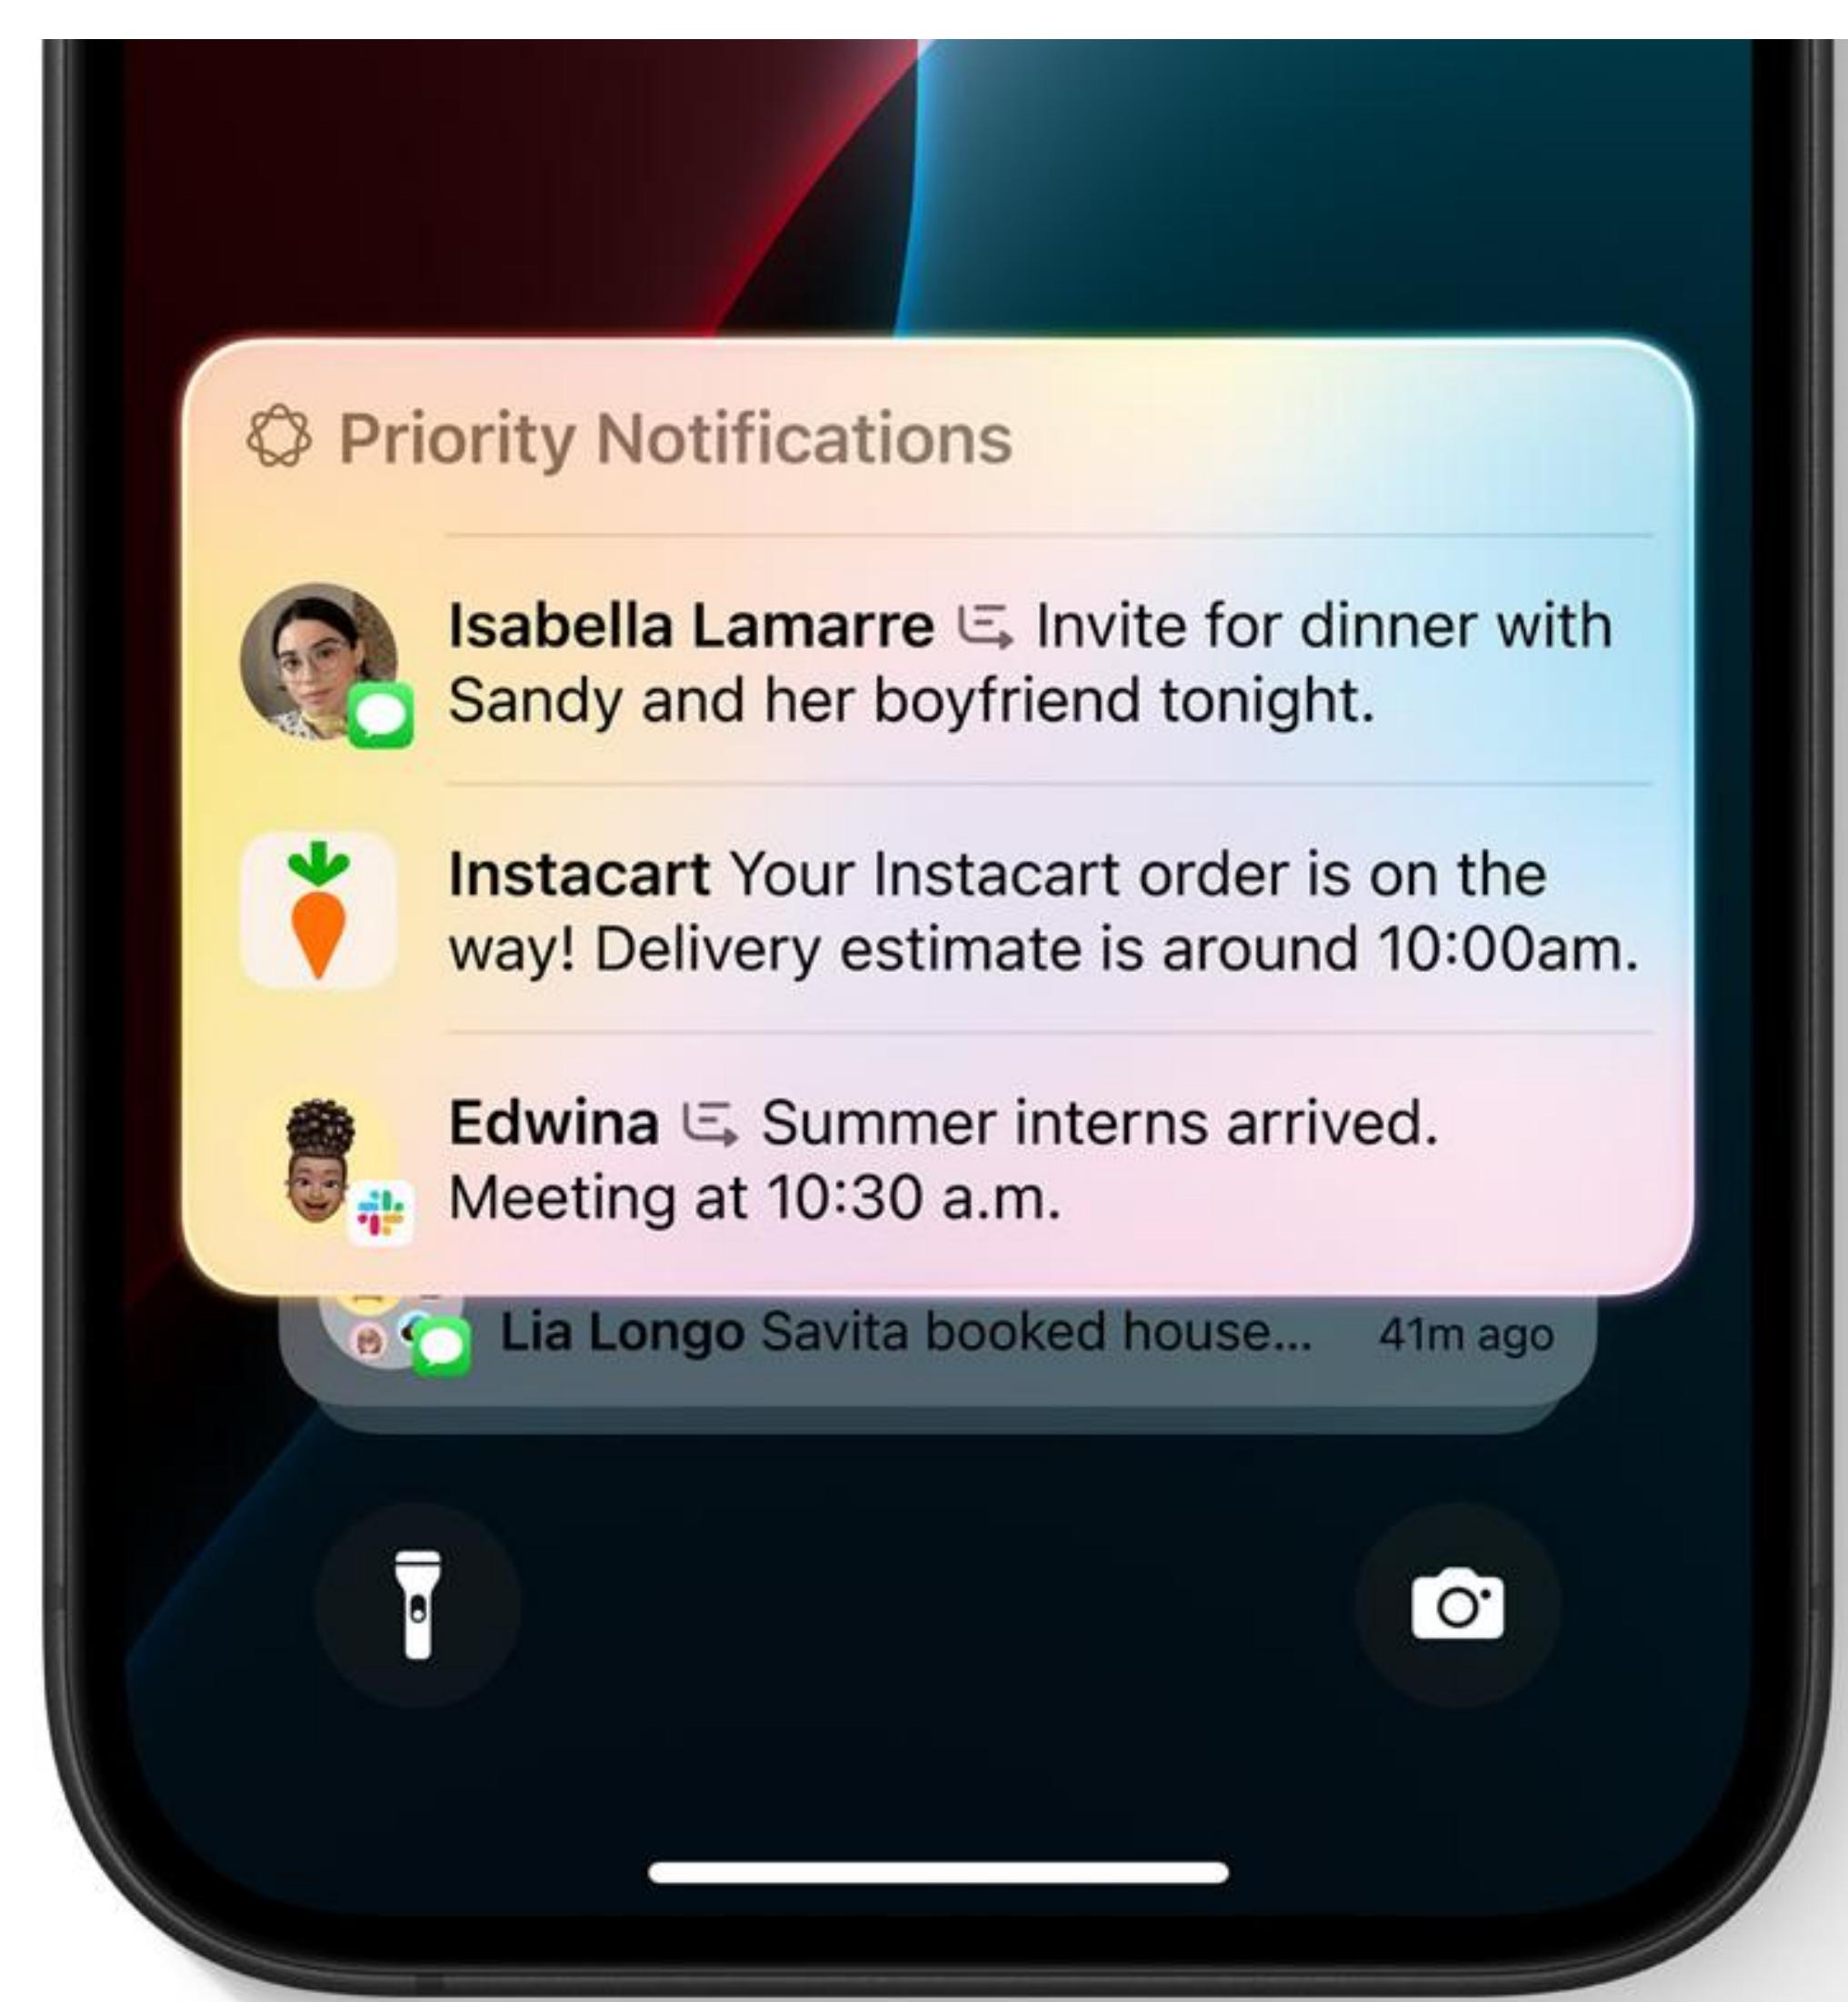

GenAI Phone

A GenAI phone is a smartphone that utilizes generative AI models and features directly on the device. This means it can create new content, perform context-aware tasks, and enhance various functionalities by leveraging AI models that are pre-trained and run locally on the phone. Essentially, it's a smartphone with built-in capabilities for generating text, images, audio, and other content, as well as enhanced AI-powered tools and features.

GenAI Phone Usage Scenarios

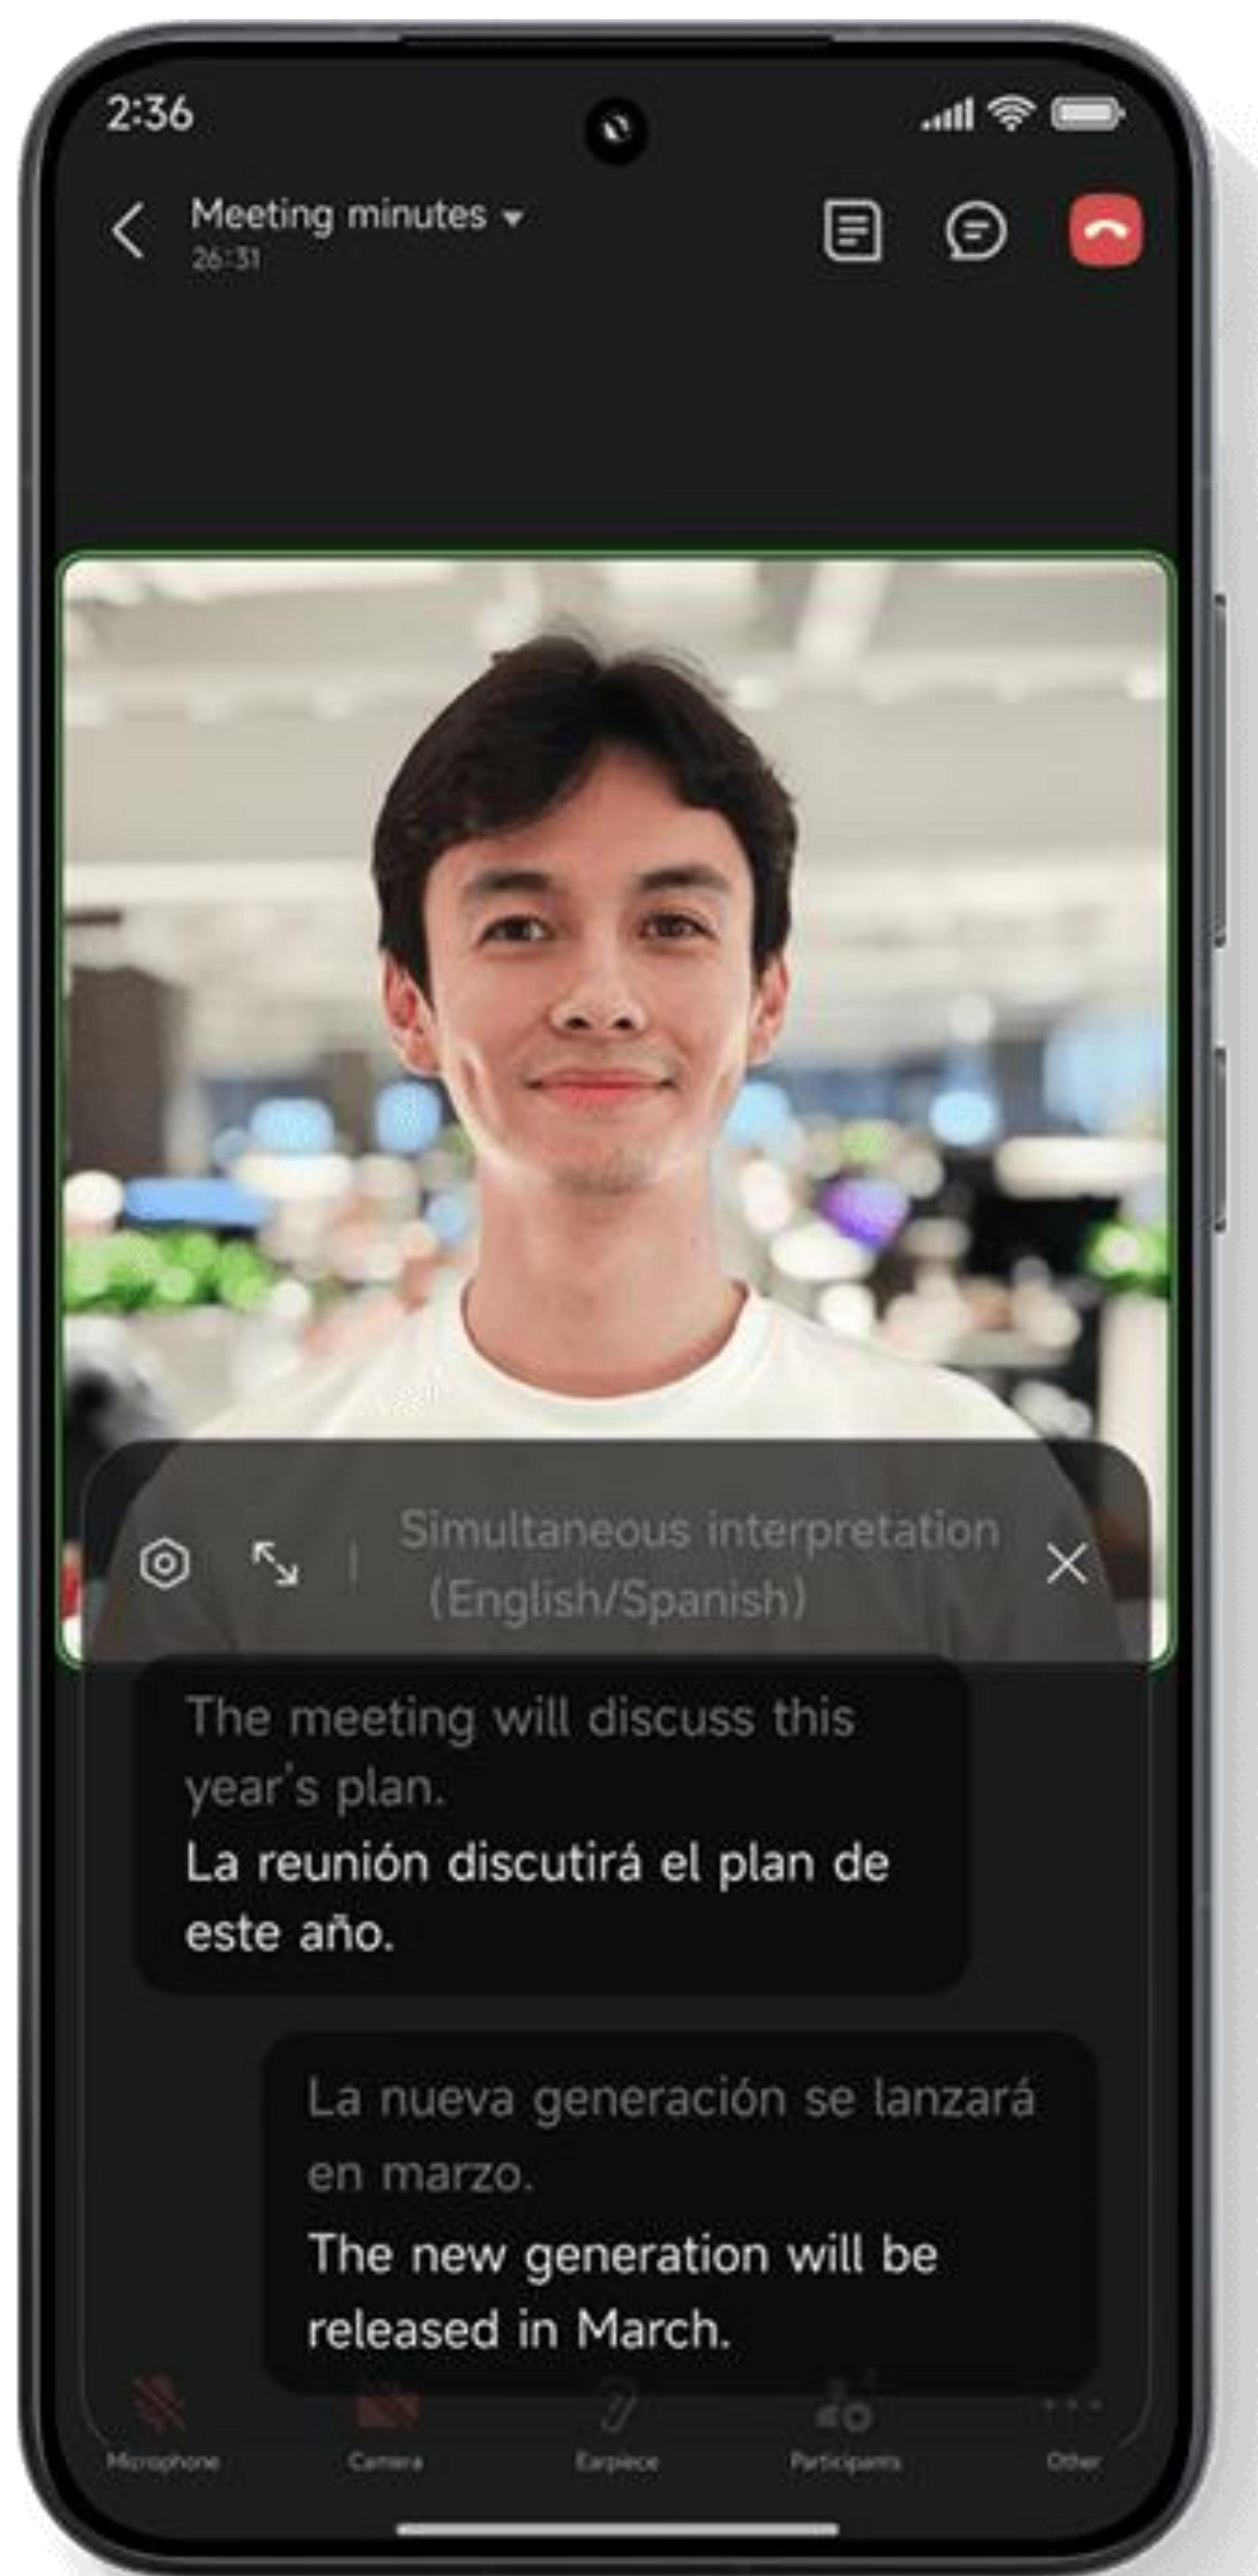

AI Unblur
Automatically remove blur from images and restore details using AI algorithms.

Priority Notifications

Priority notifications appear at the top of the stack, letting you know what to pay attention to at a glance. And notifications are summarized, so you can scan them faster.

AI Speech Recognition
Automatically converts speech to text, with speaker recognition, summary generation, and translation.

AI Gesture Reactions
Add special effects with a simple gesture during video calls.

GenAI Phone Usage Scenarios

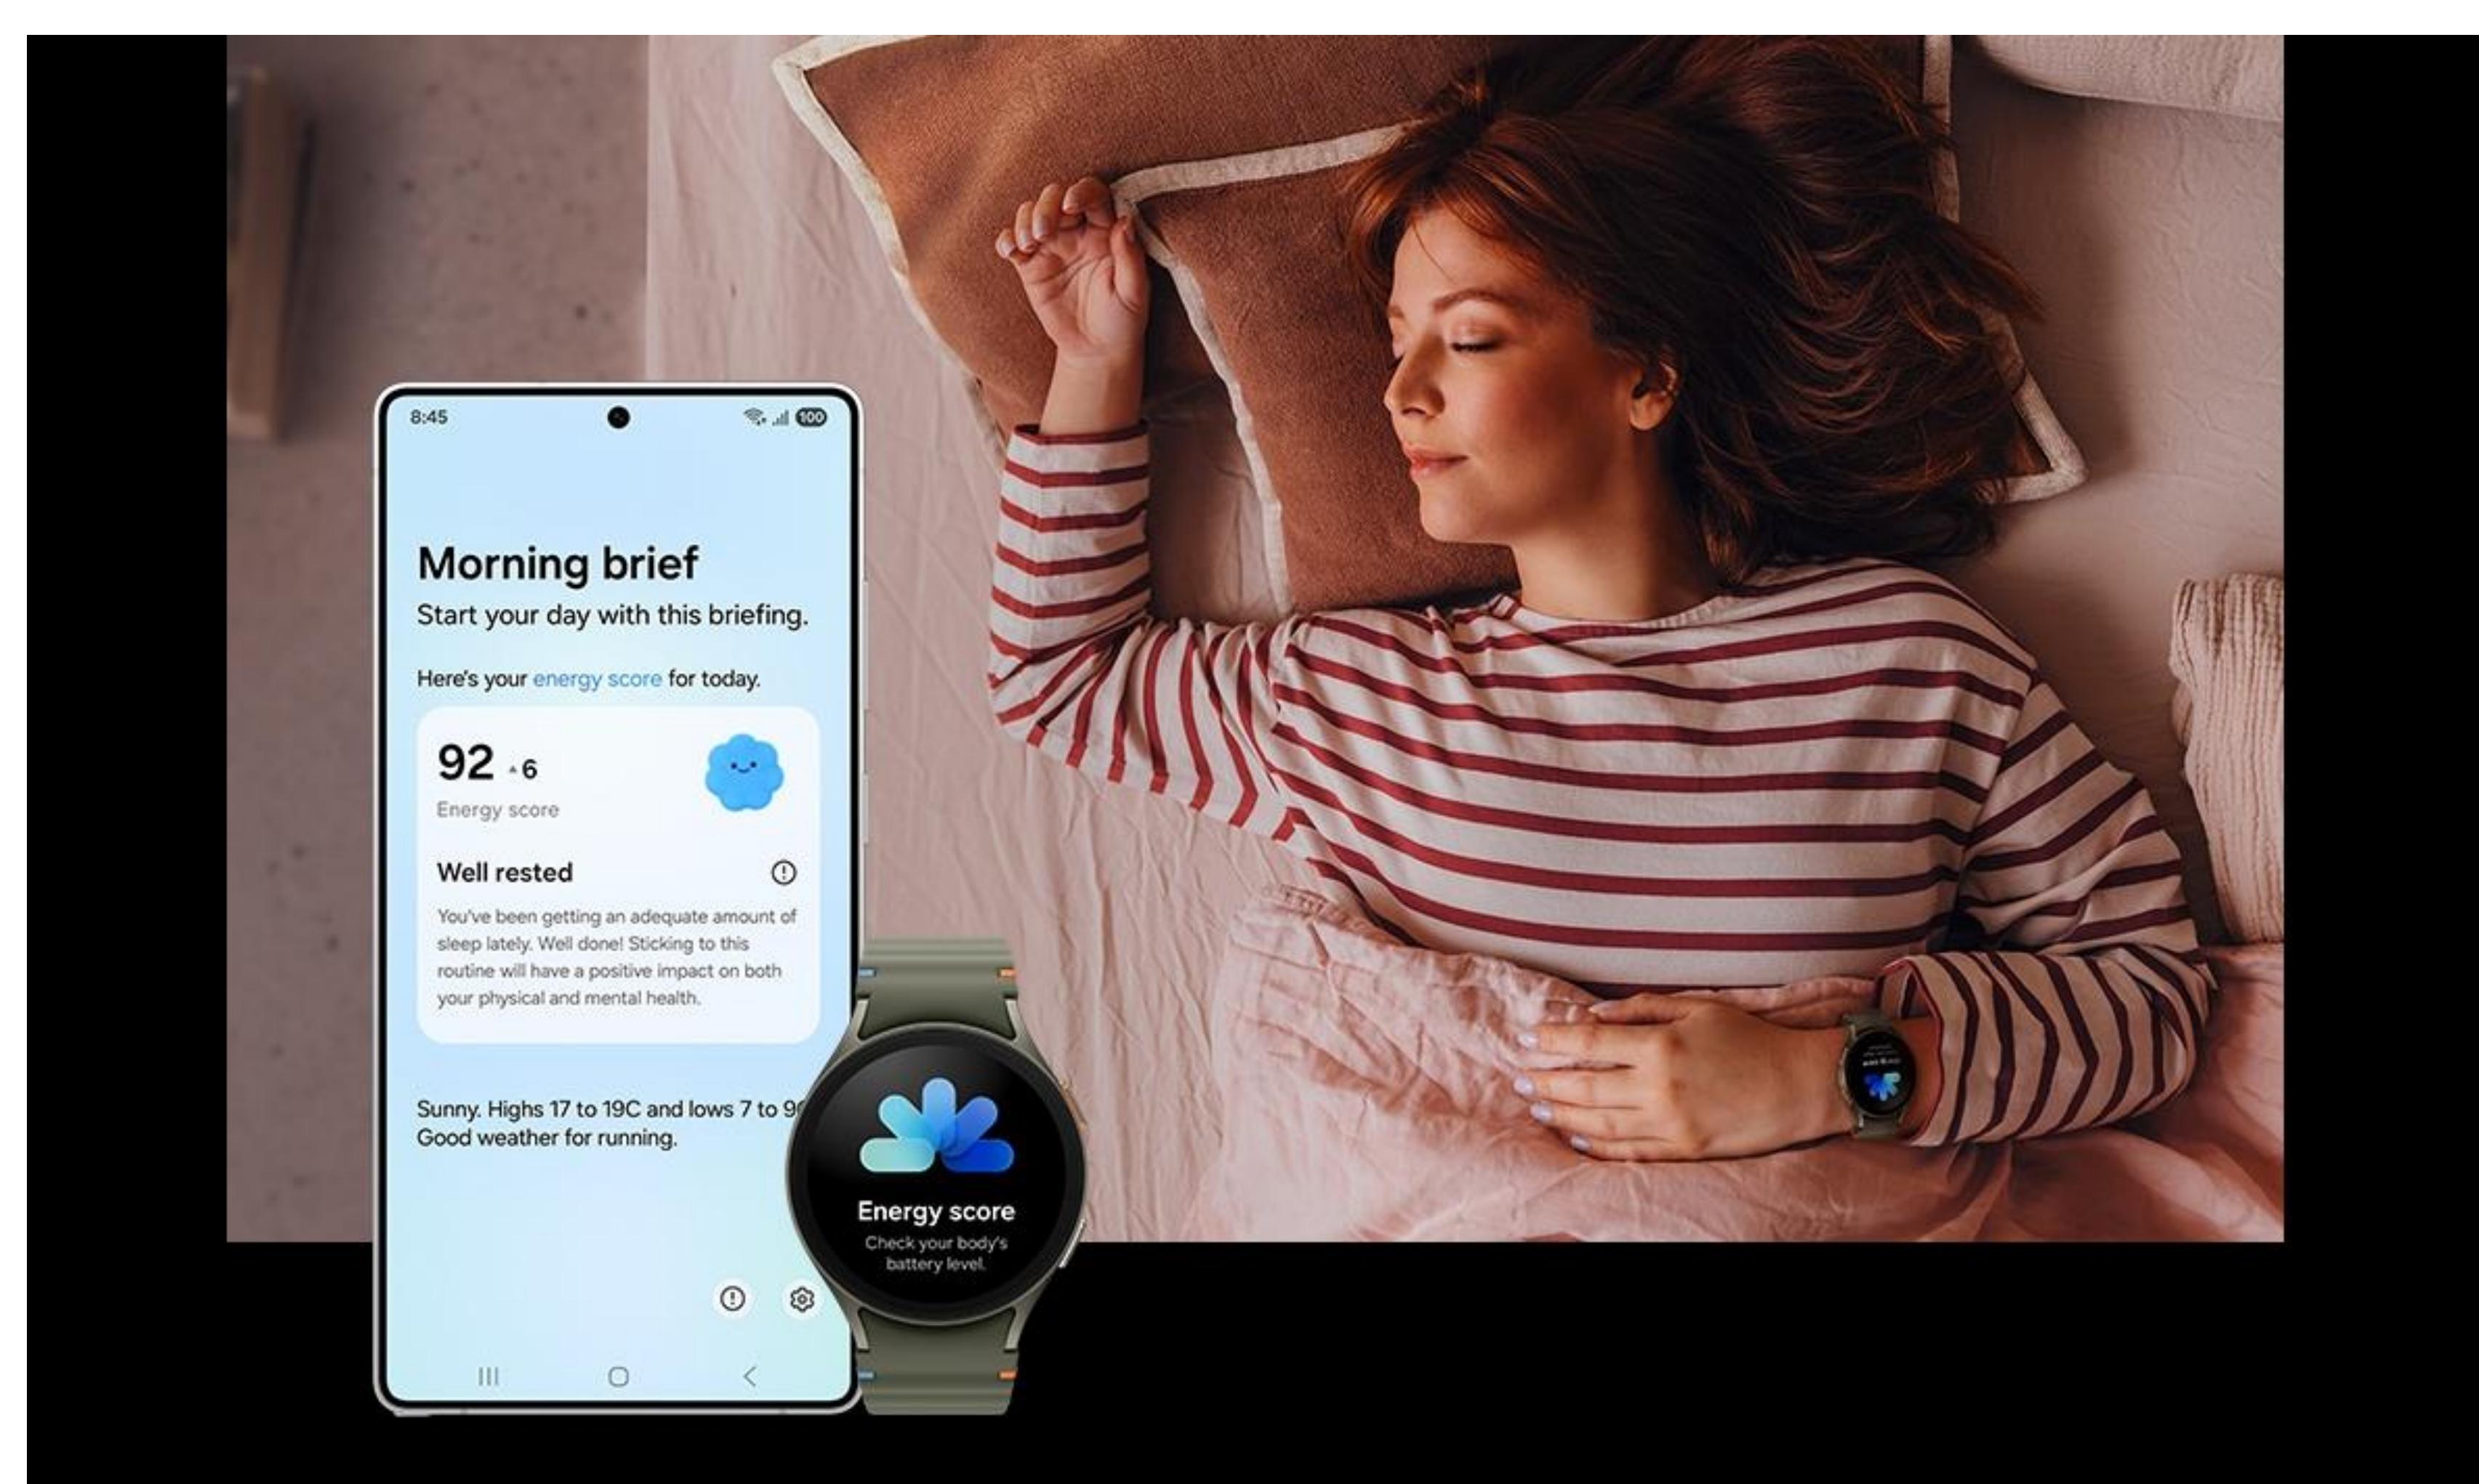

Circle to Search

Circle to Search can help you quickly identify items in a photo or video. Relevant ads will continue to appear in dedicated slots throughout the page.

deepfake detection

In the era of thriving AI technology, seeing is not necessarily believing. The AI Deepfake Detection ensures the security of video calls, promising peace of mind.

Get Product Knowledge

You can ask questions when you're learning how to do something new on your iPhone, and Siri can give you step-by-step directions in a flash.

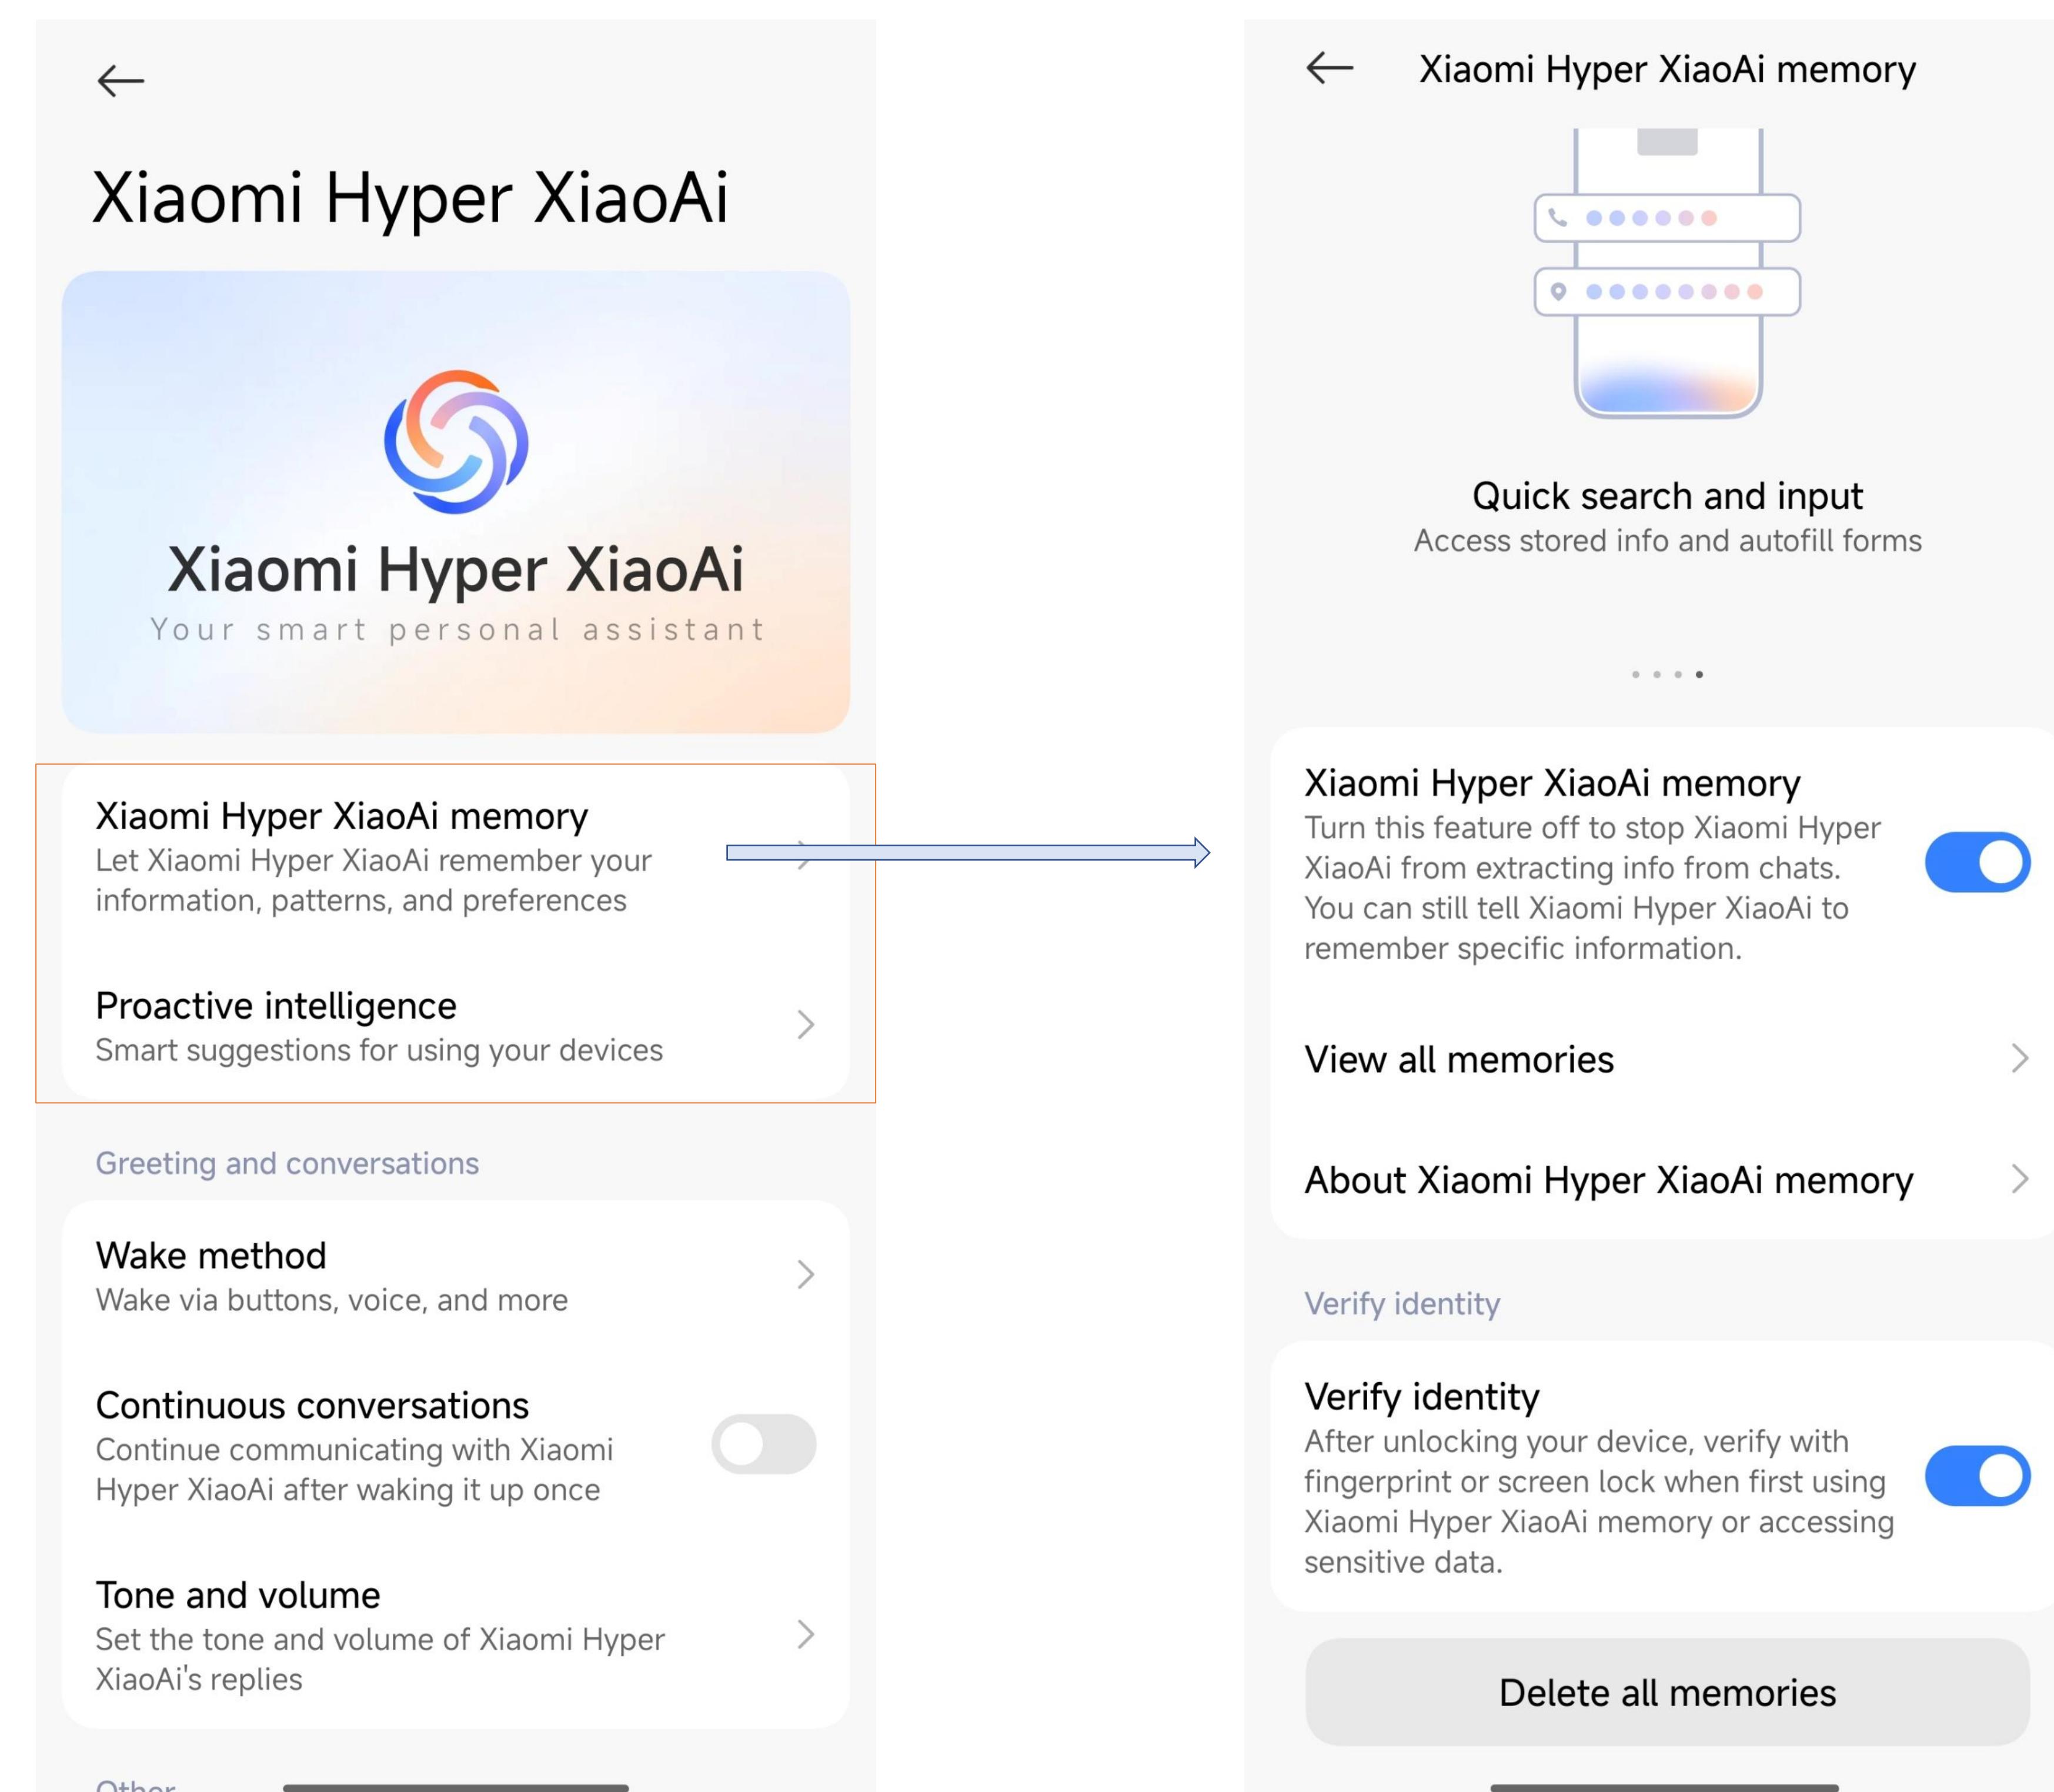

Health Assist

Energise your lifestyle with Health Assist Energy Score. By connecting to your Galaxy Watch, you can learn more about your body with a personalised analysis of your sleep, nutrition, energy, and activity.

Privacy and Security Settings

The following will show the privacy and security management settings of some mobile phone brands regarding AI.

Xiaomi Hyper XiaoAi

This screenshot shows the 'Other settings' and 'Permissions' sections of the Xiaomi Hyper XiaoAi app.

Other settings

- Proactive intelligence
- Greeting and conversations
- Wake method
- Continuous conversations
- Tone and volume
- Additional settings
- Feedback & other settings
- About voice assistant
- Privacy
- Feedback

Permissions

- Access storage
- Access camera
- Record audio
- Send SMS
- Make calls

Privacy switch

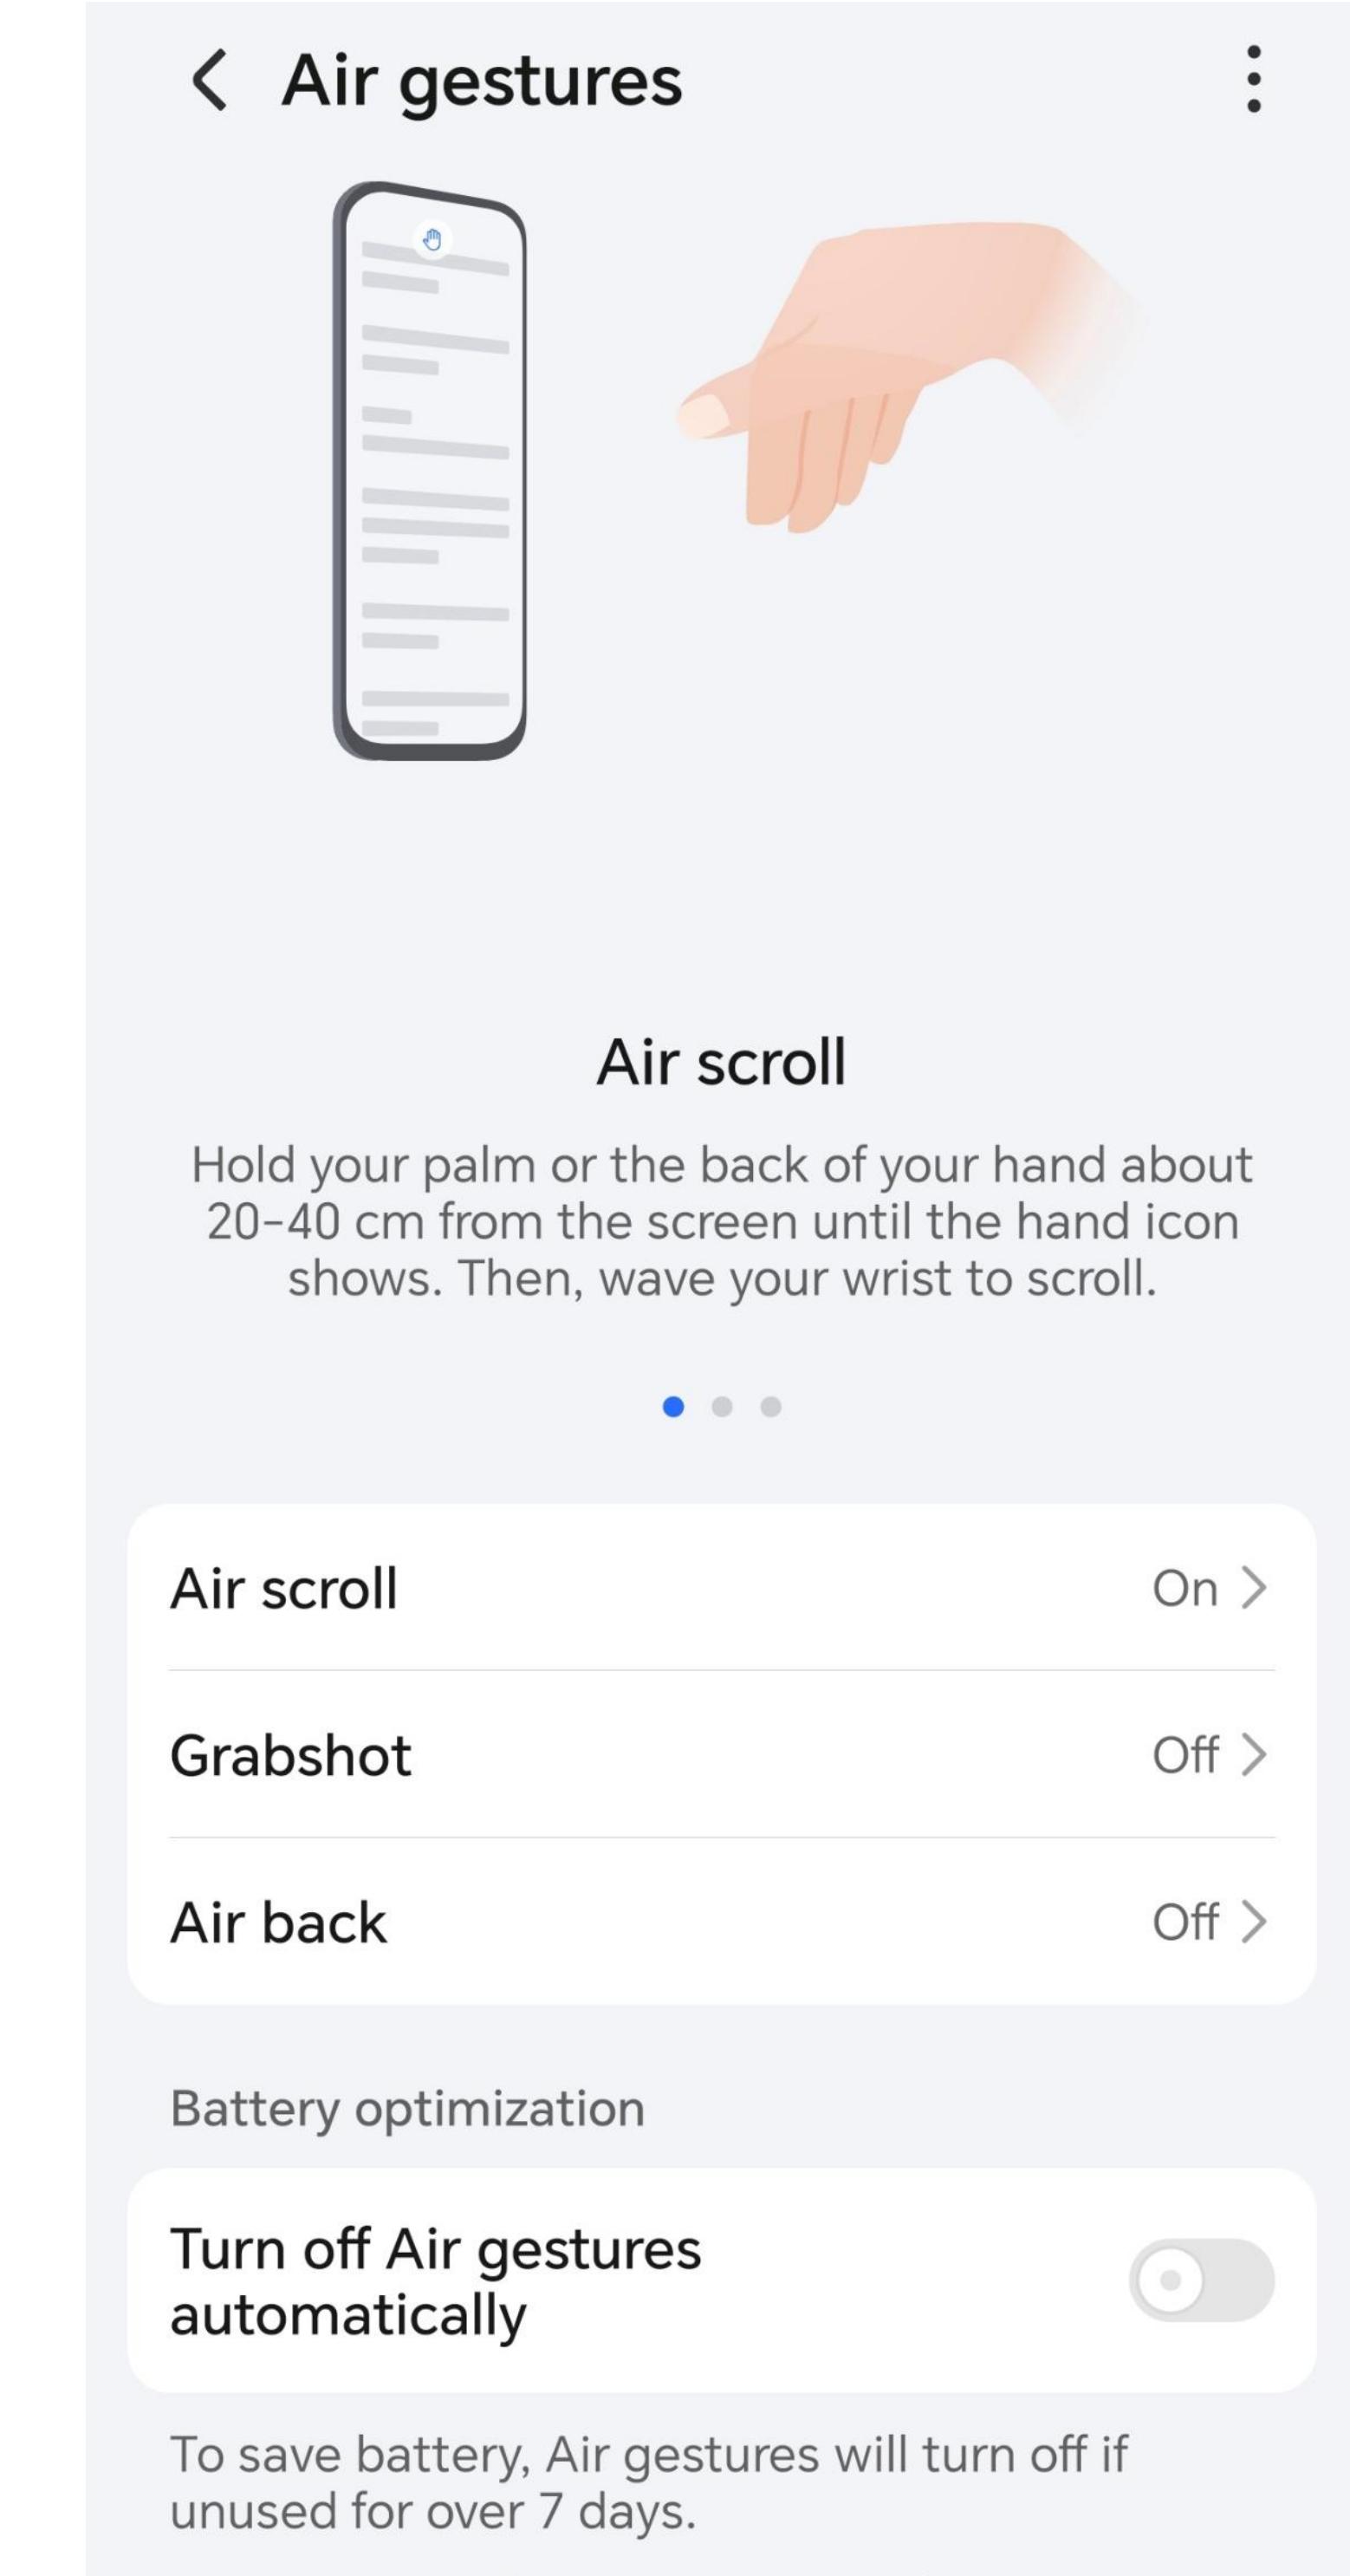

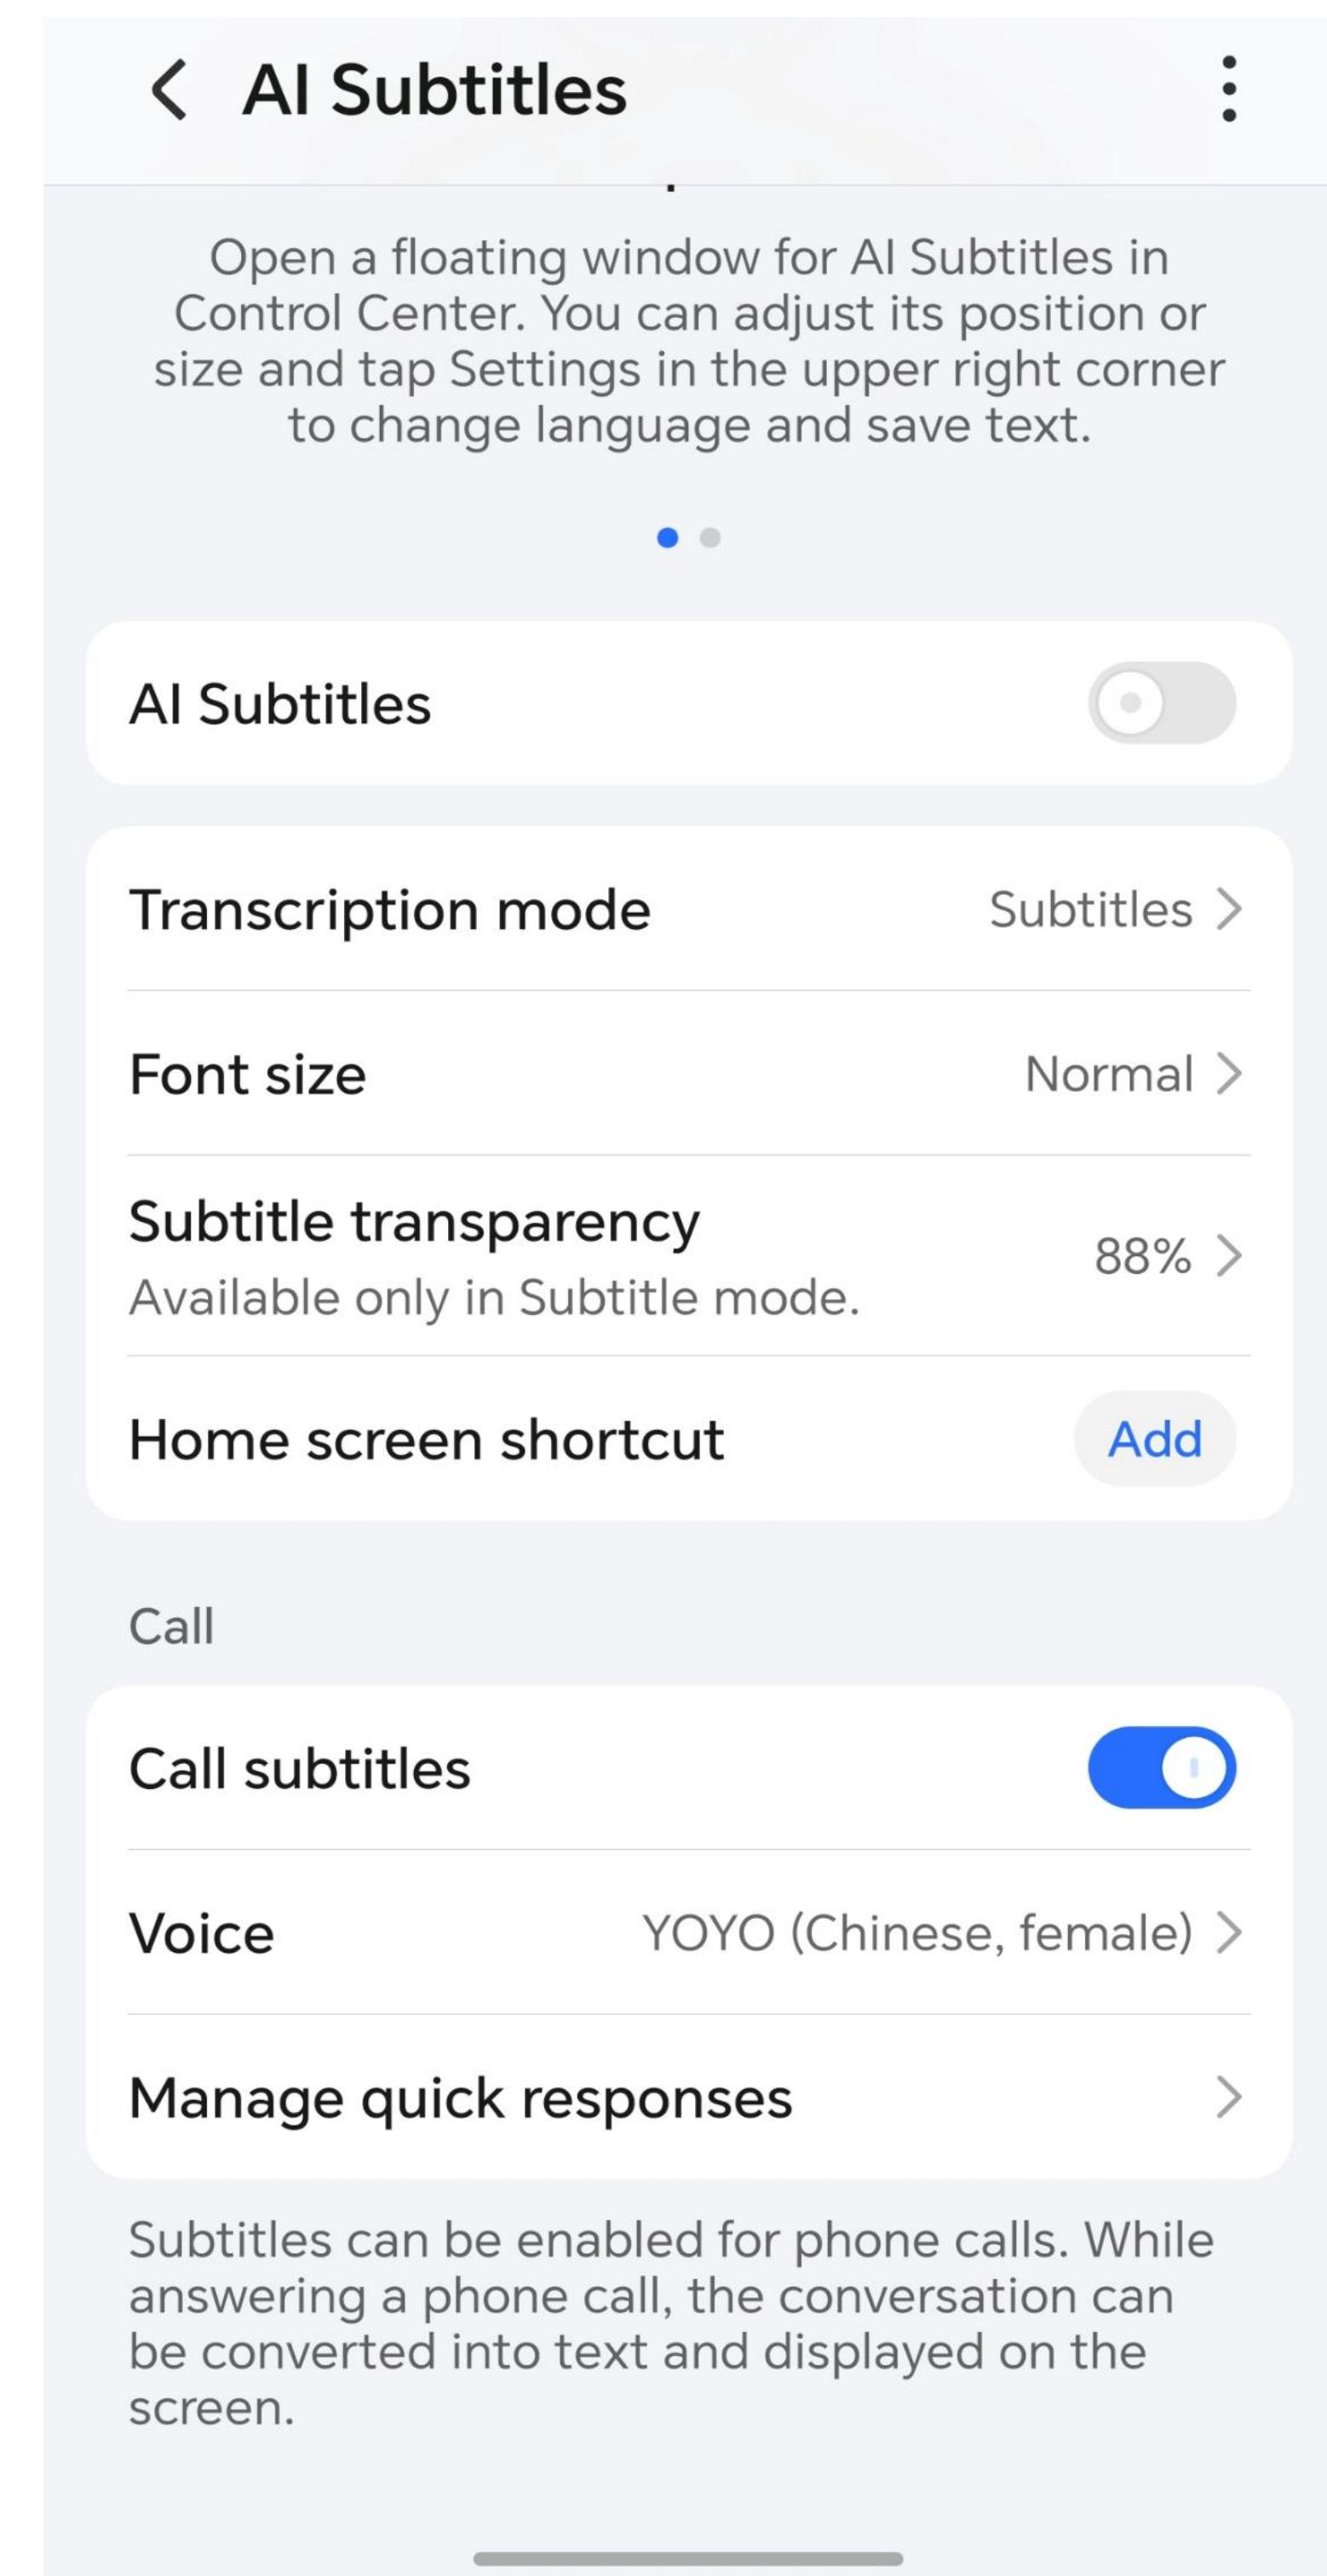

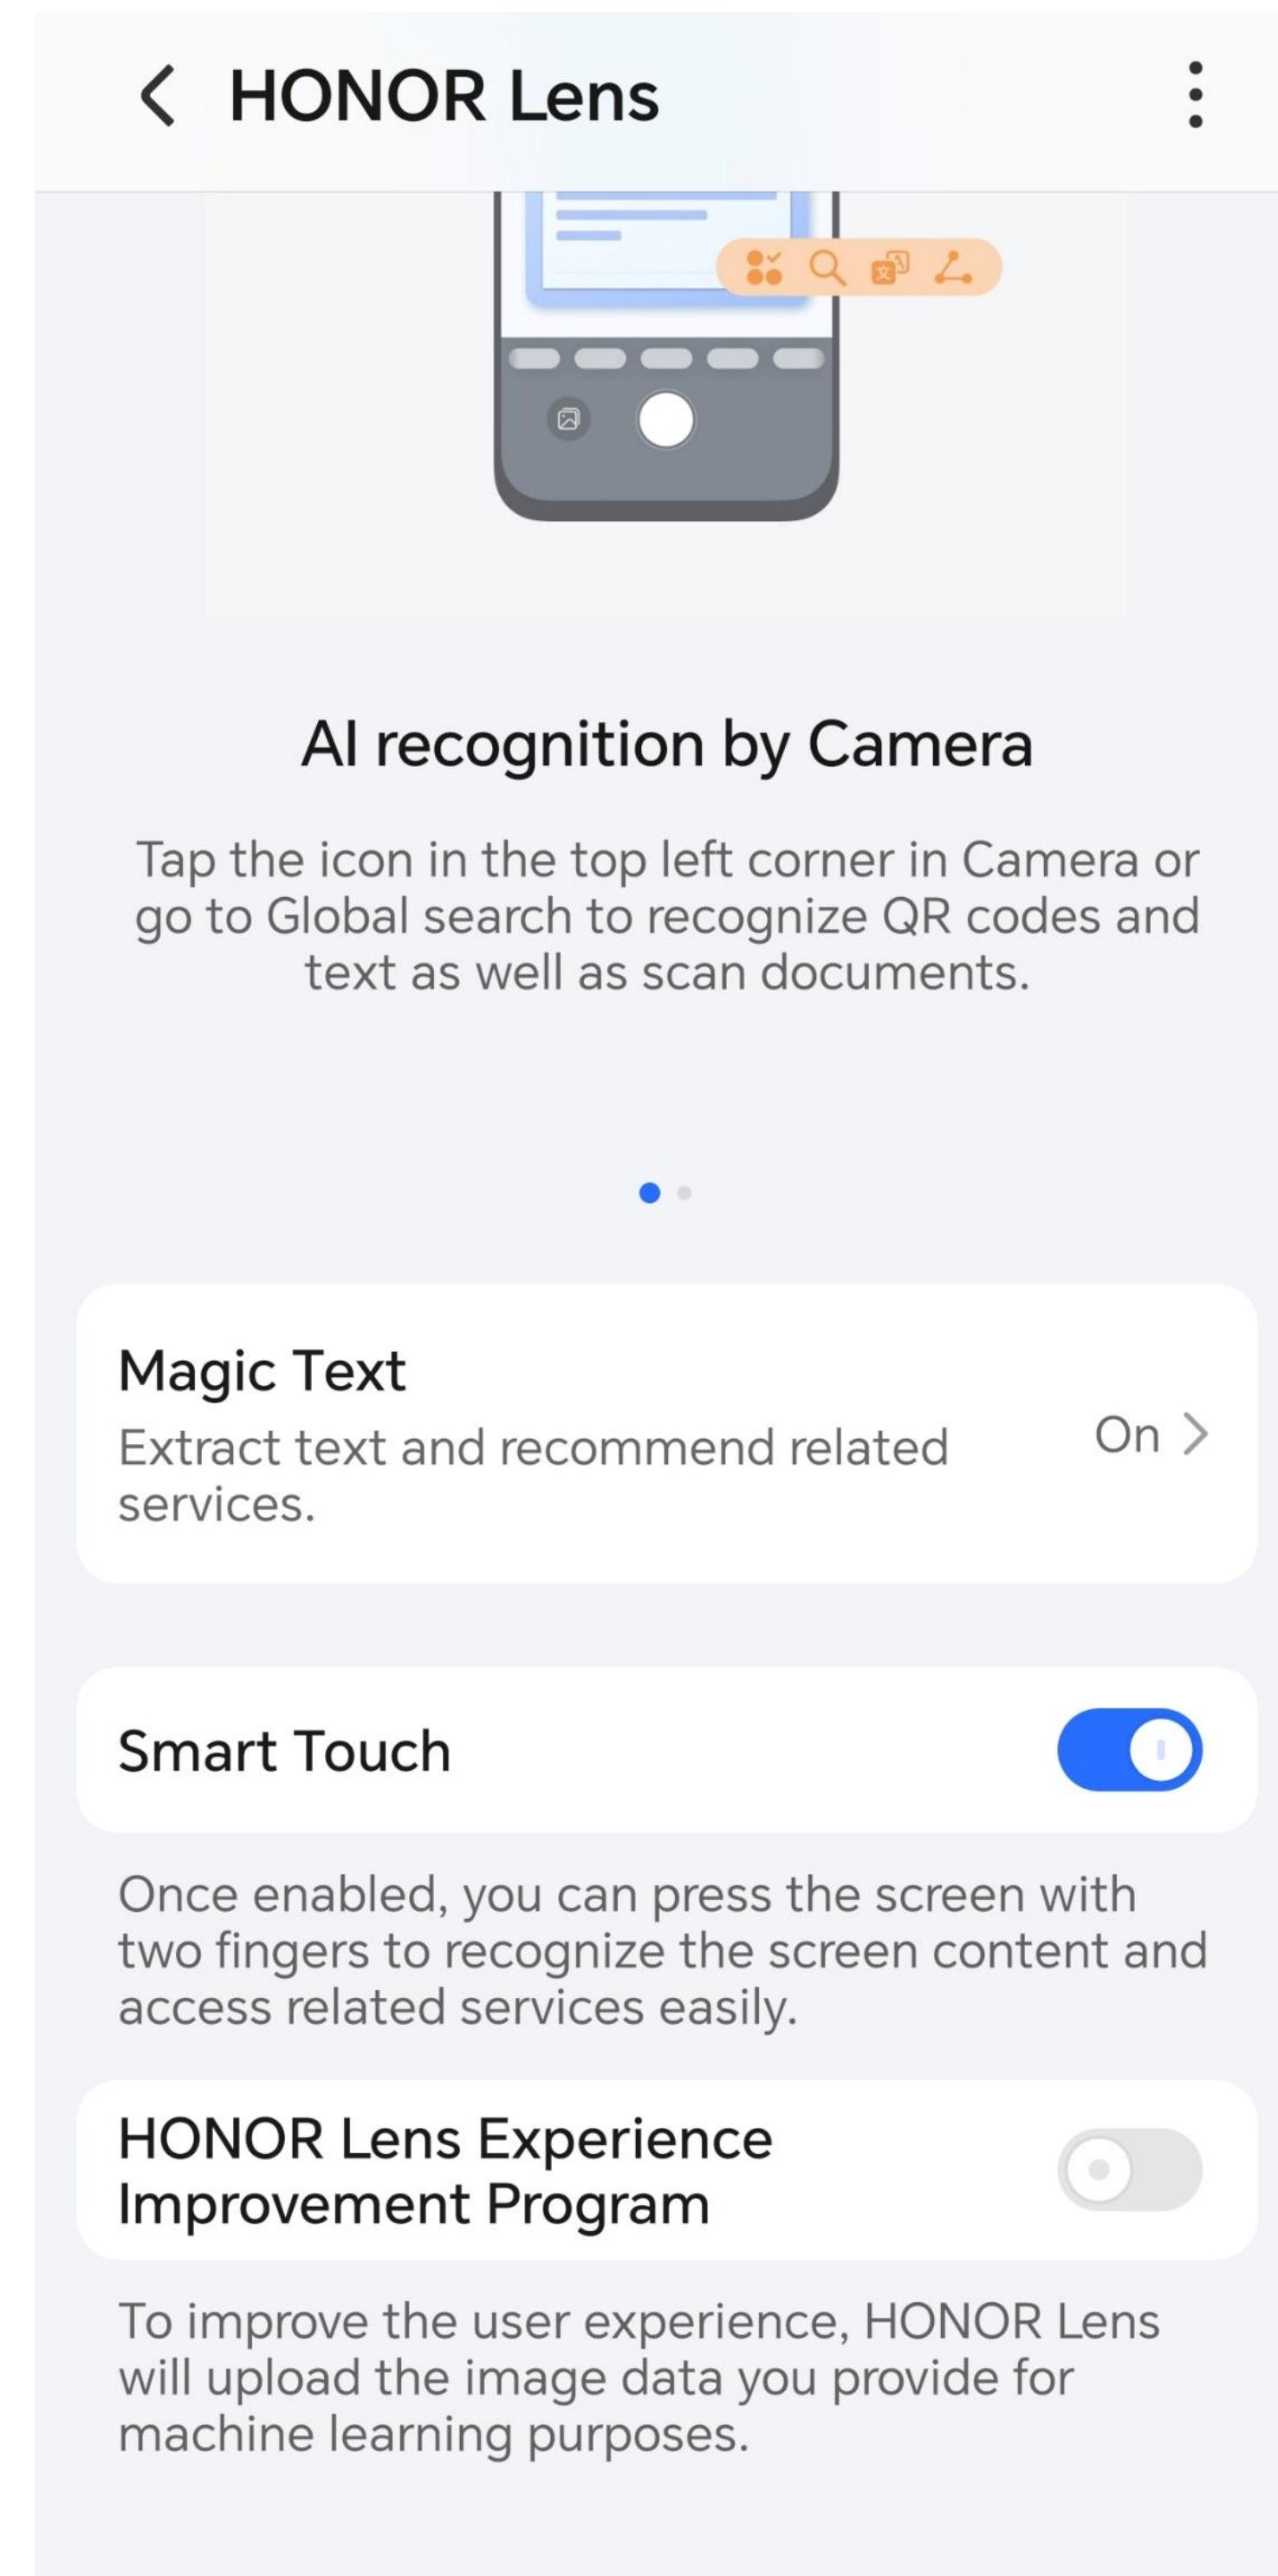

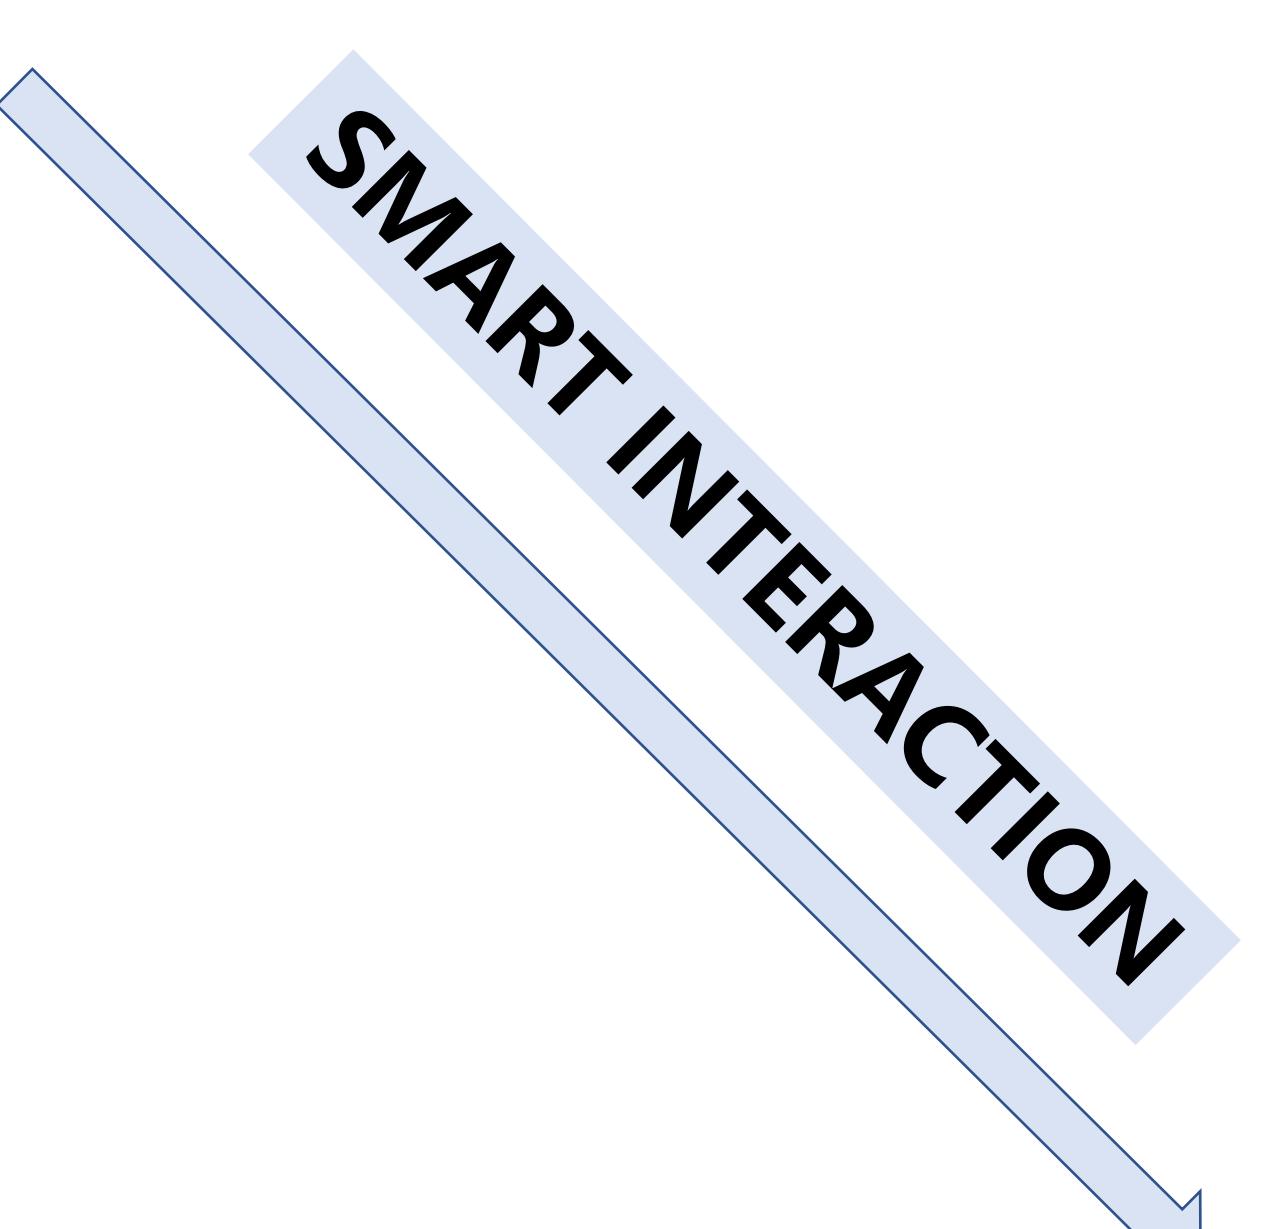

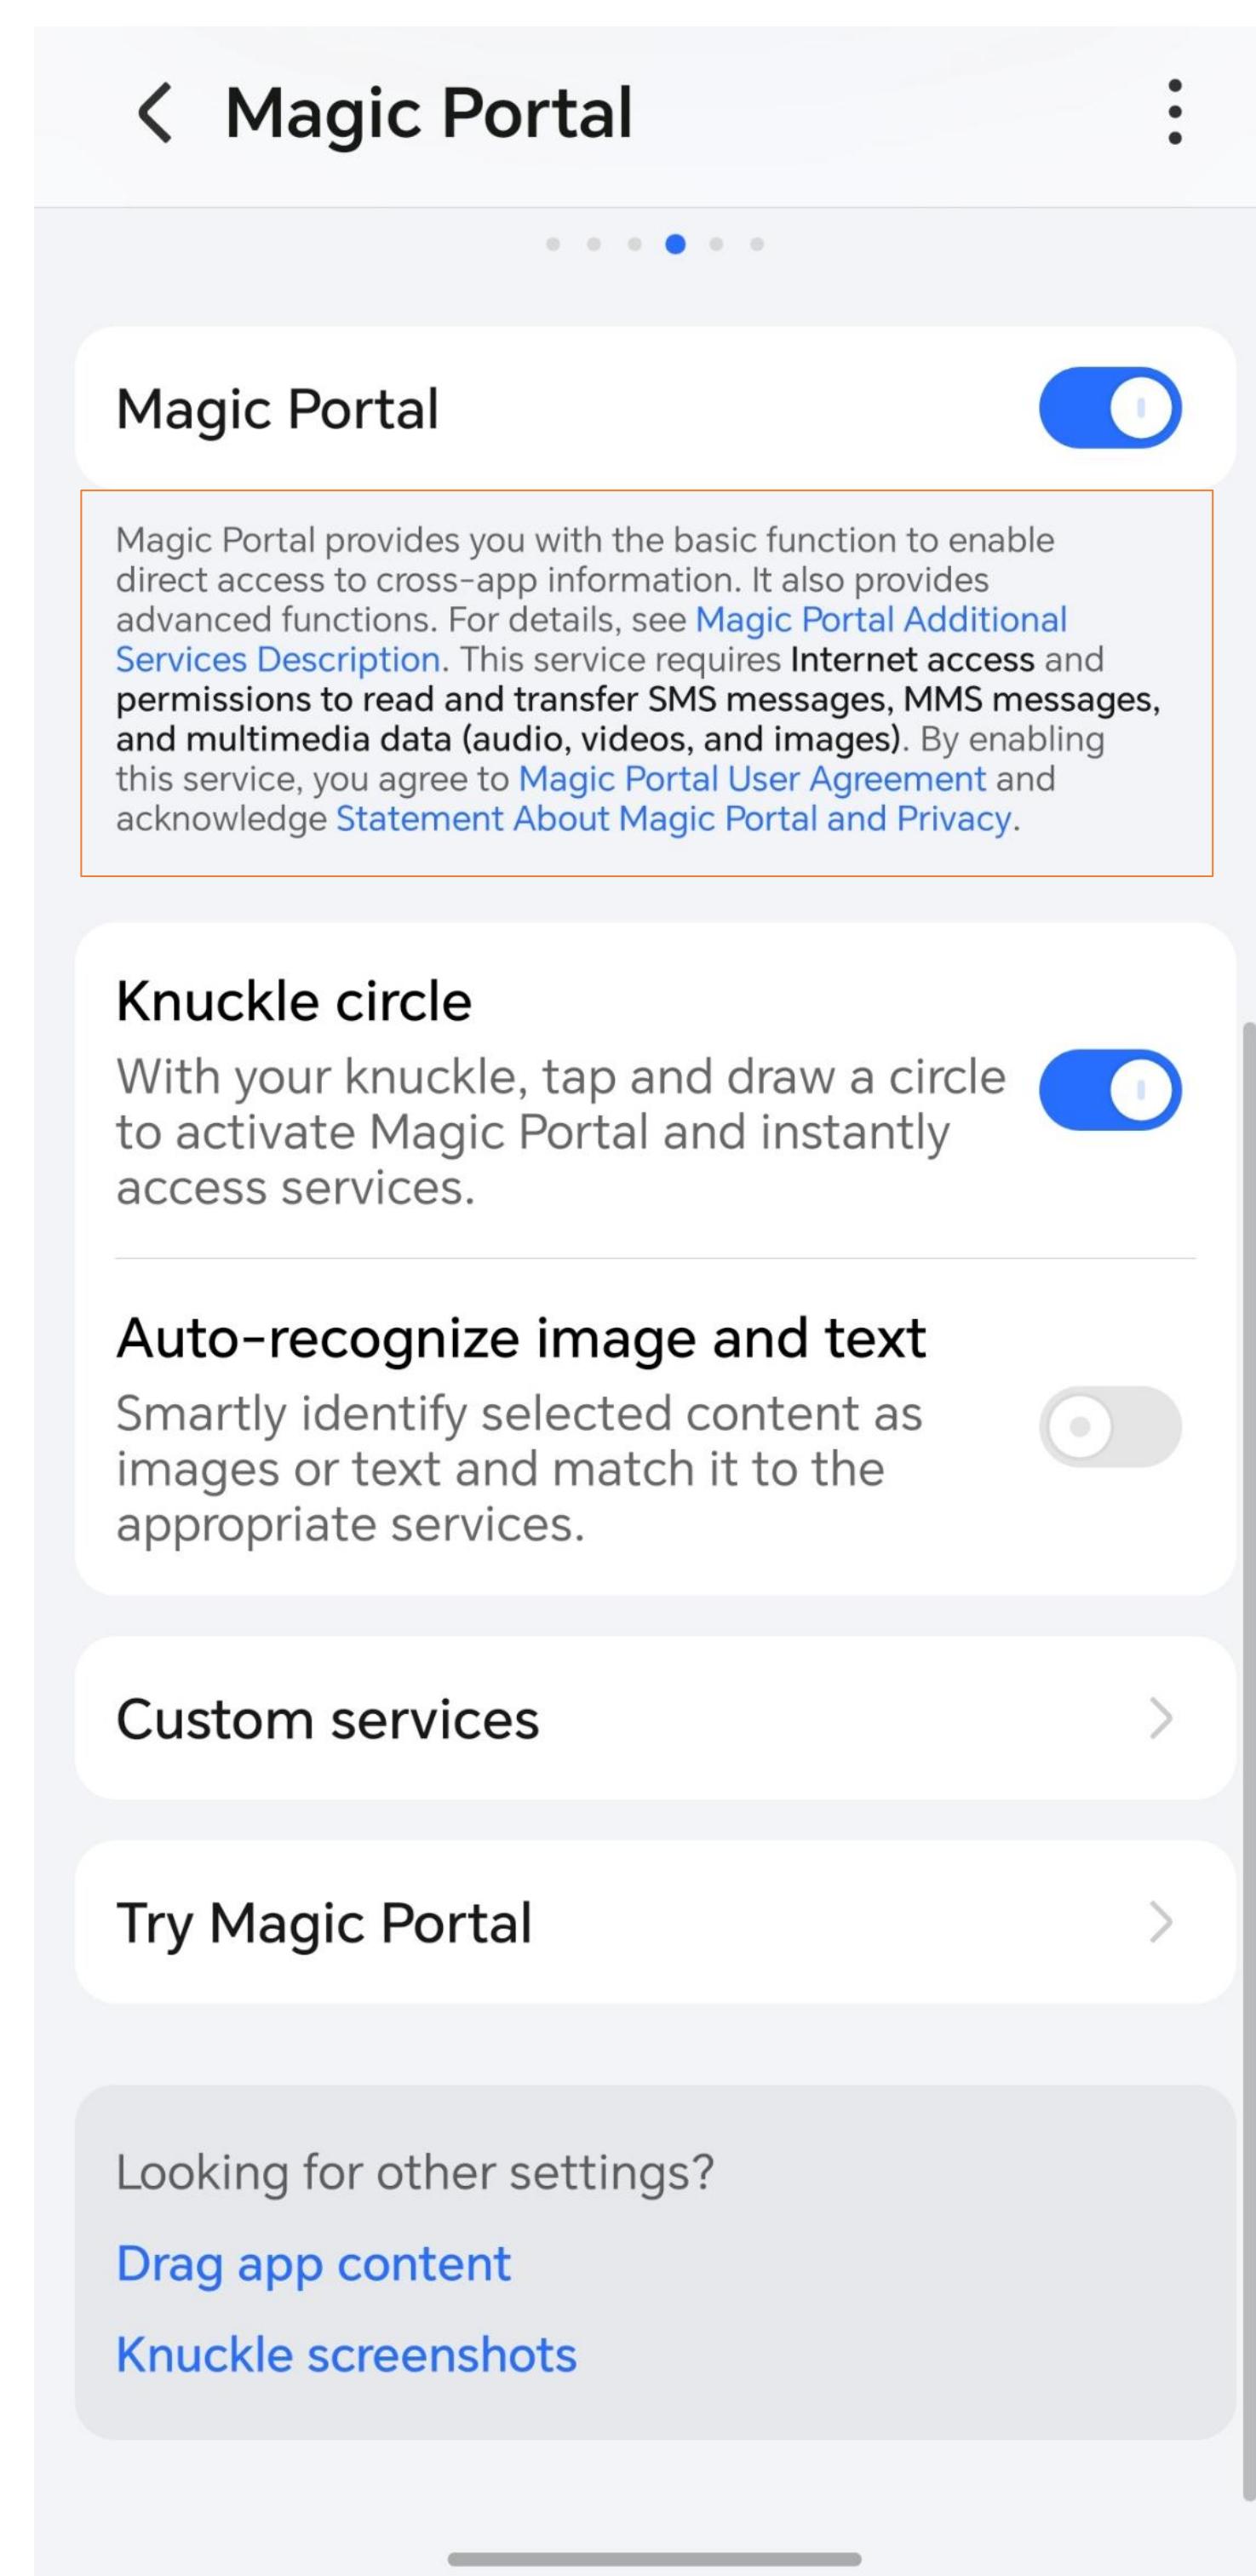

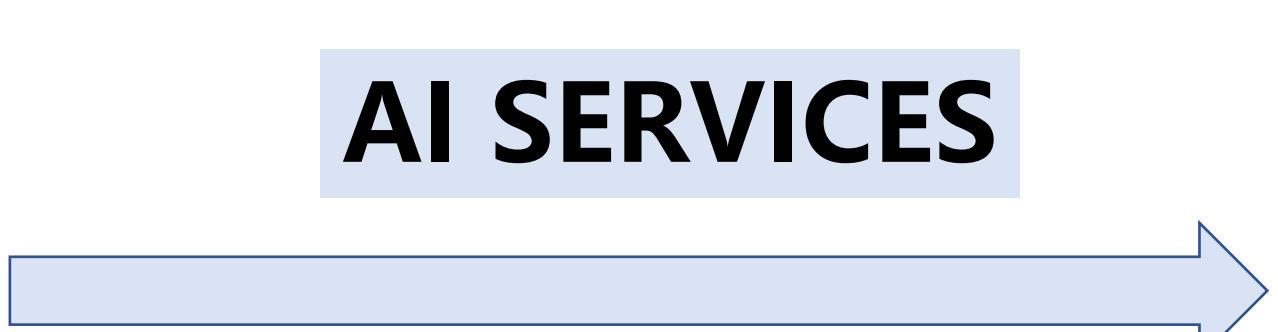

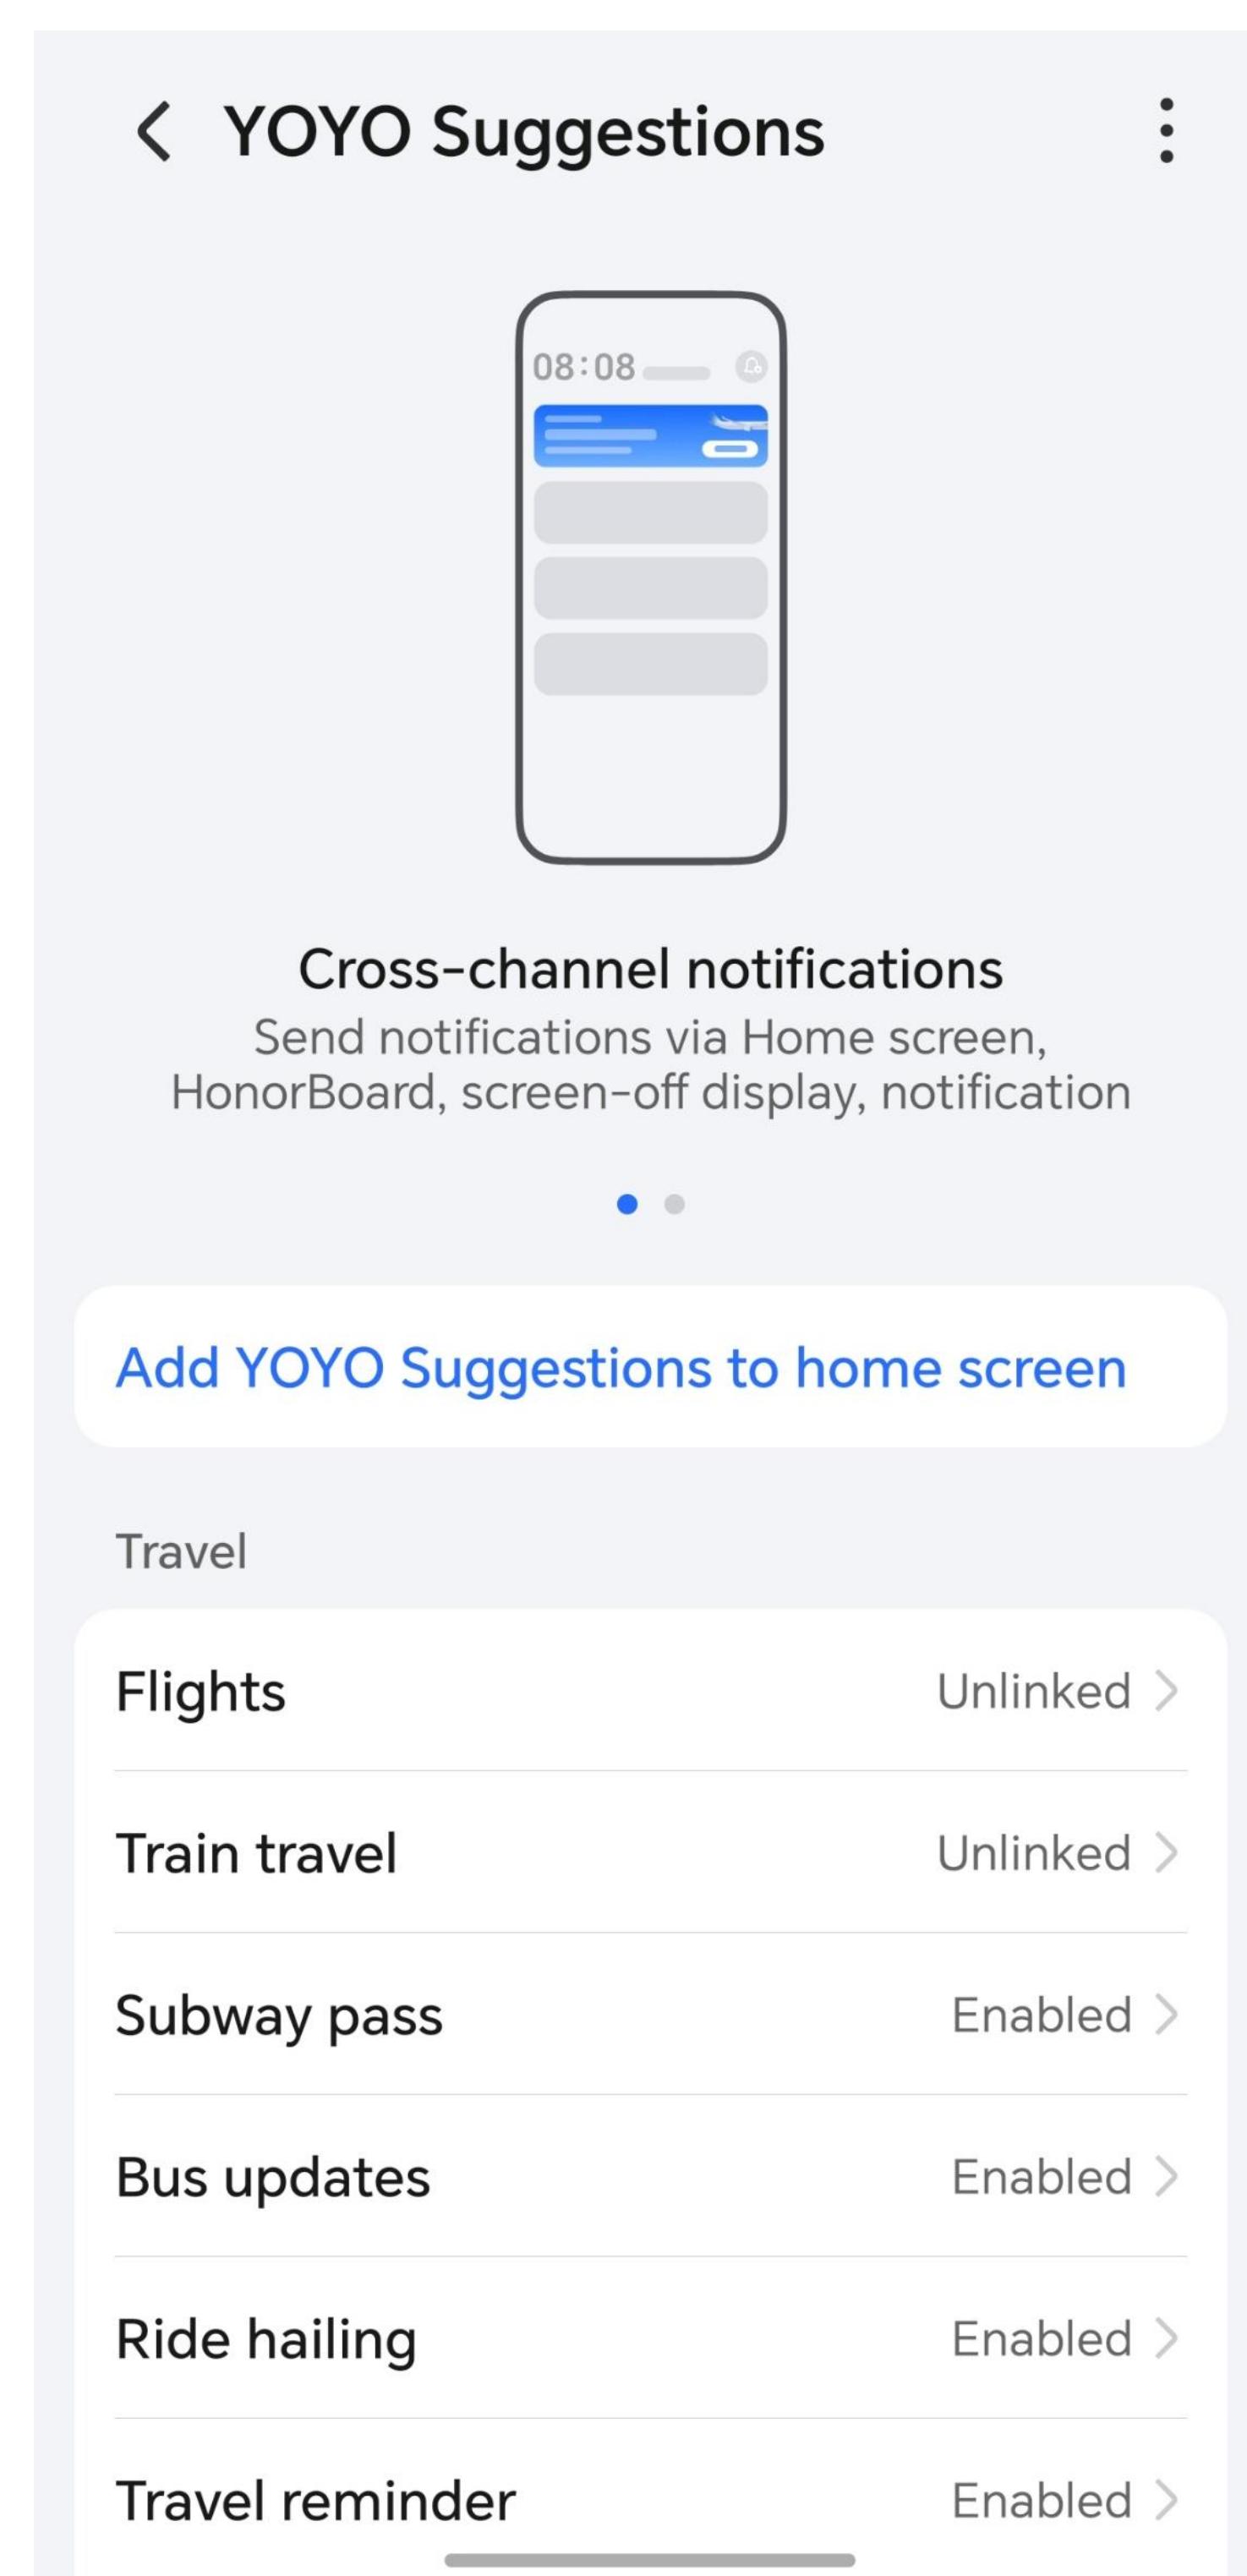

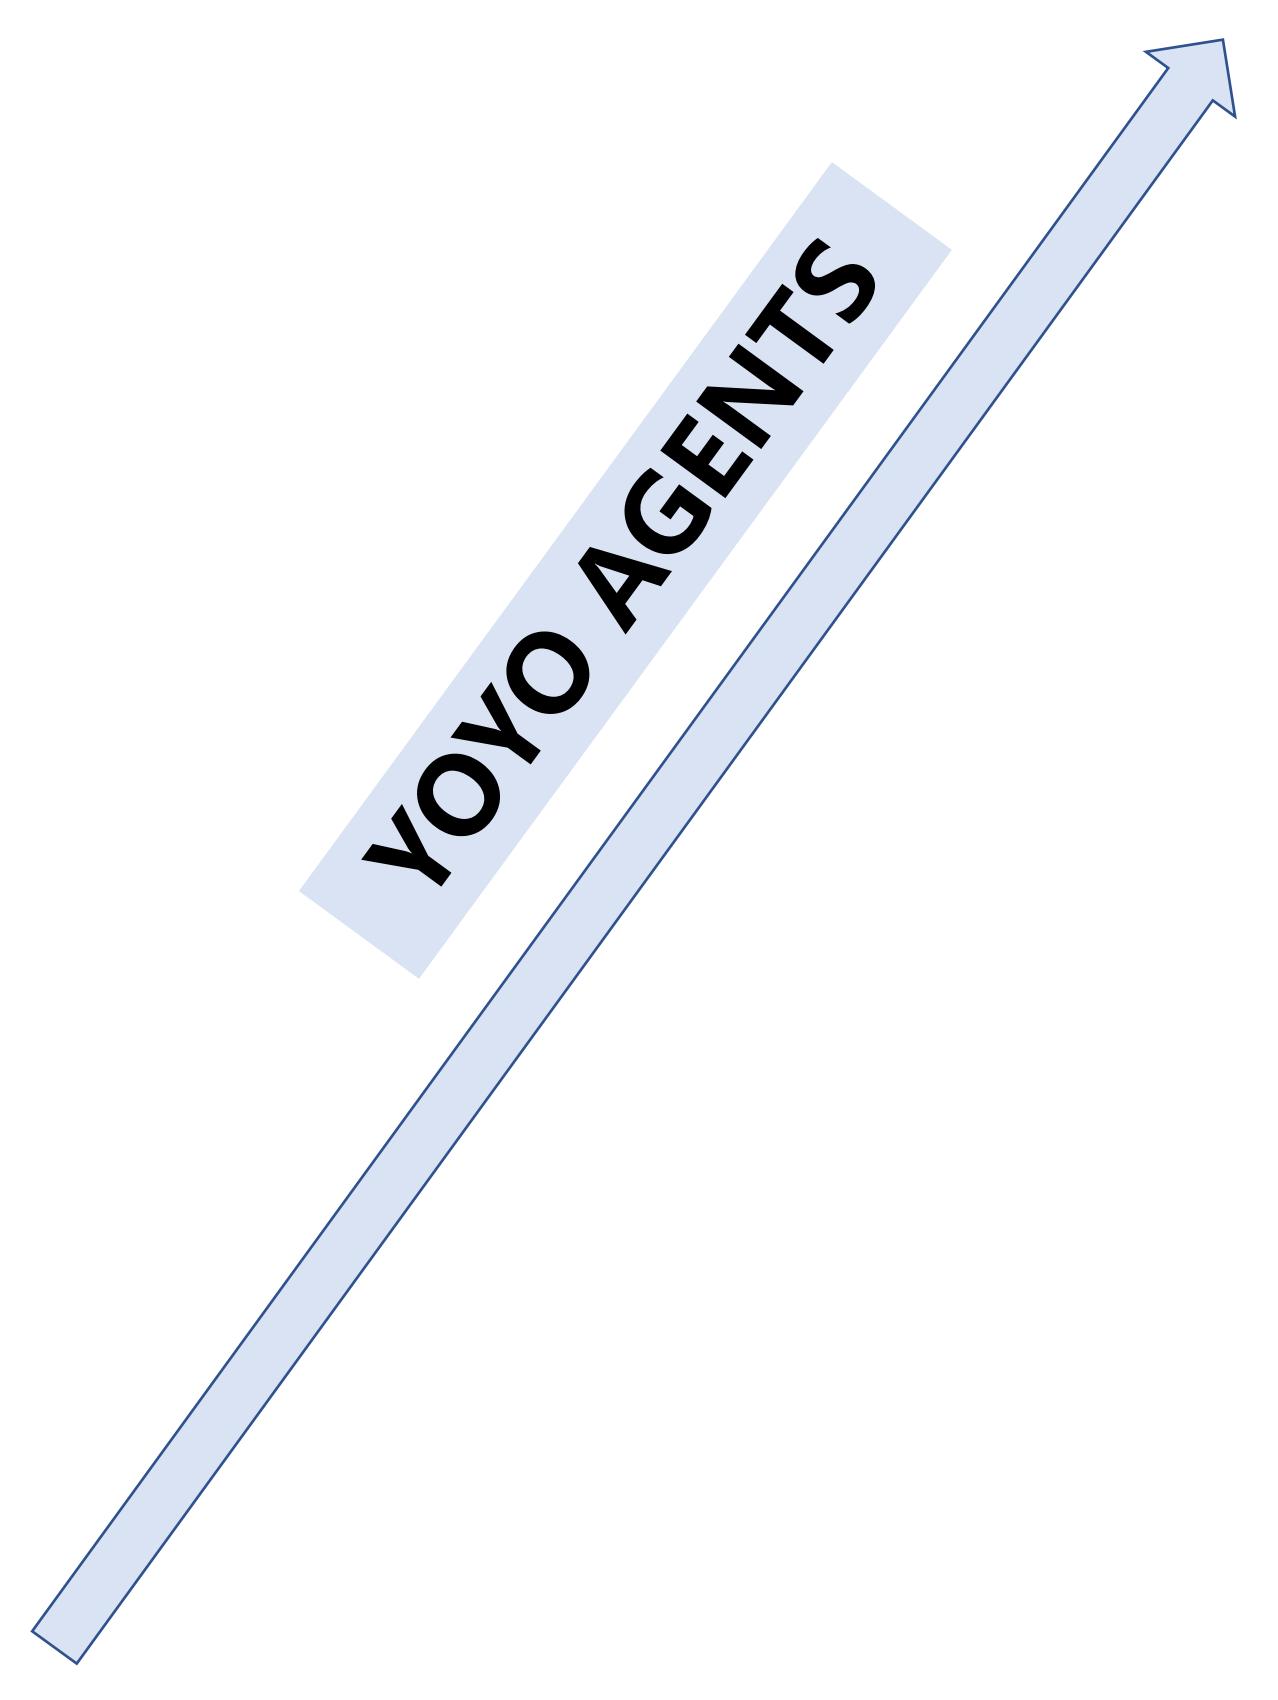

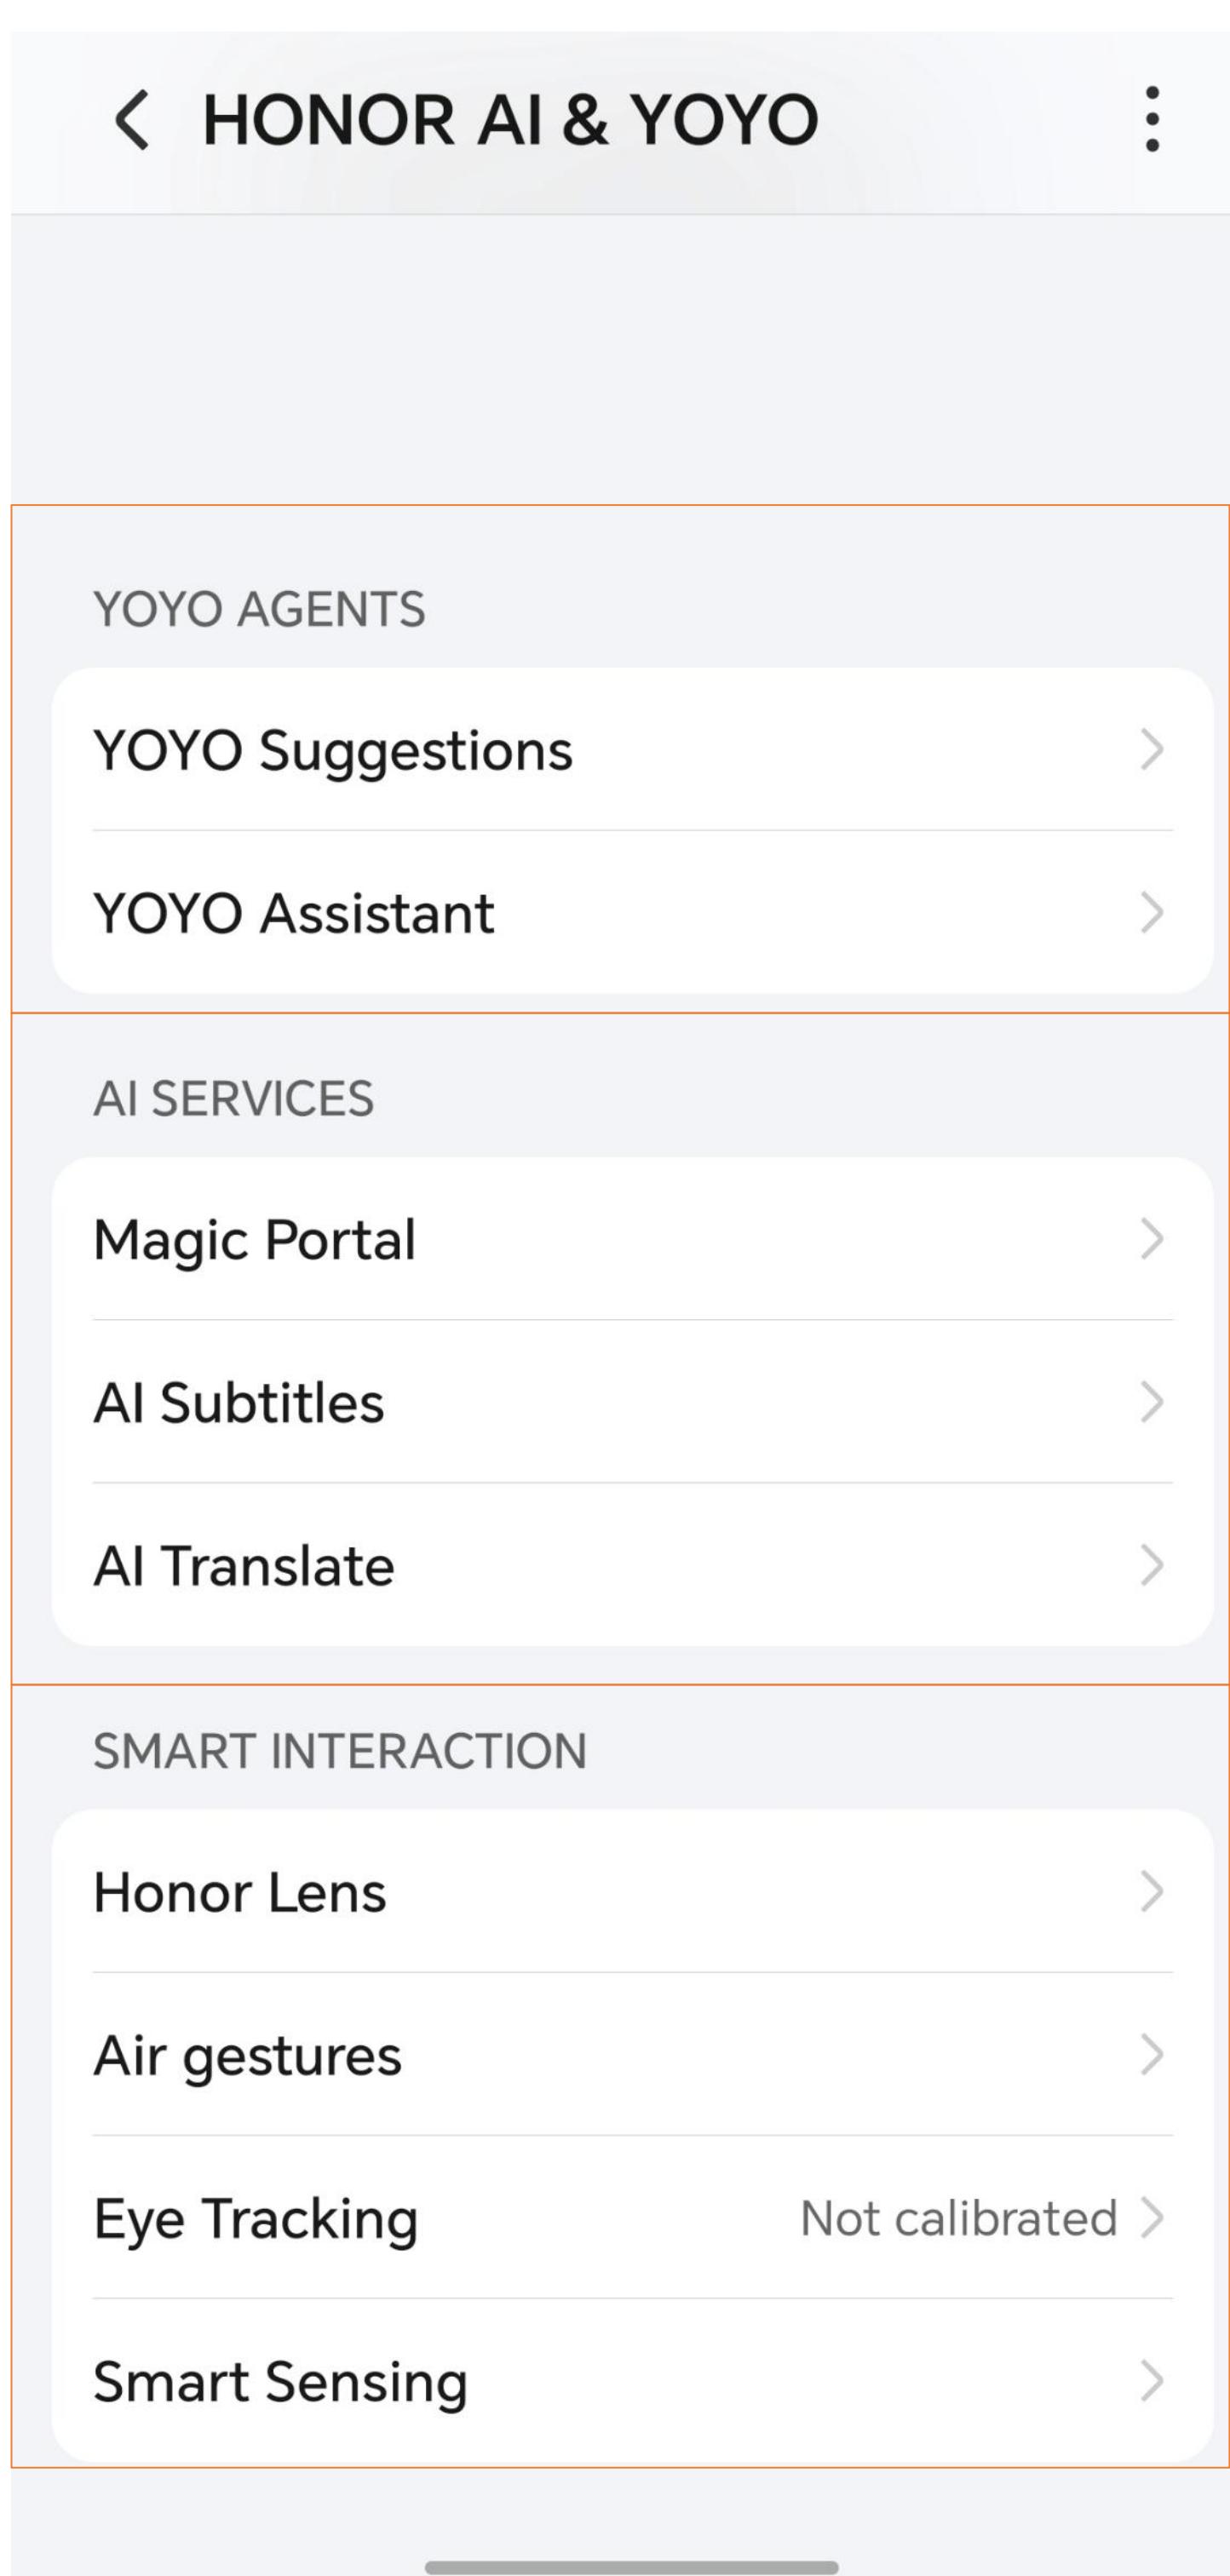

- Simulate taps
- Access screen content
- Access menstruation info
- Access calendar events
- Bluetooth smart control
- Allow Xiaomi Hyper XiaoAi to learn new skills
- Lock screen voice control

Privacy

- Privacy switch
- Permissions
- Additional features
- Cancel Xiaomi Hyper XiaoAi services
- Withdrawal of consent
- Legal documents
- Privacy agreement
- User Experience Program
- Collection of personal information
- Third party information sharing
